REMARKMicrophony and hum

This tube can be used without special precautions against microphony in equipment in which the input voltage $V_i \geq 5$ mV for an output of 50 mW (or 50 mV for an output of 5 W) provided the average acceleration of the tube is not greater than indicated in the section "Microphonic effect" of the "Application directions". In this case the disturbance level for hum and noise will be better than -60 dB when the centre tap of the heater has been earthed, $R_g \leq 0.5$ MΩ and the cathode resistor is sufficiently decoupled.
