

Alt. R
5.6 : 1
Single End to Line Output

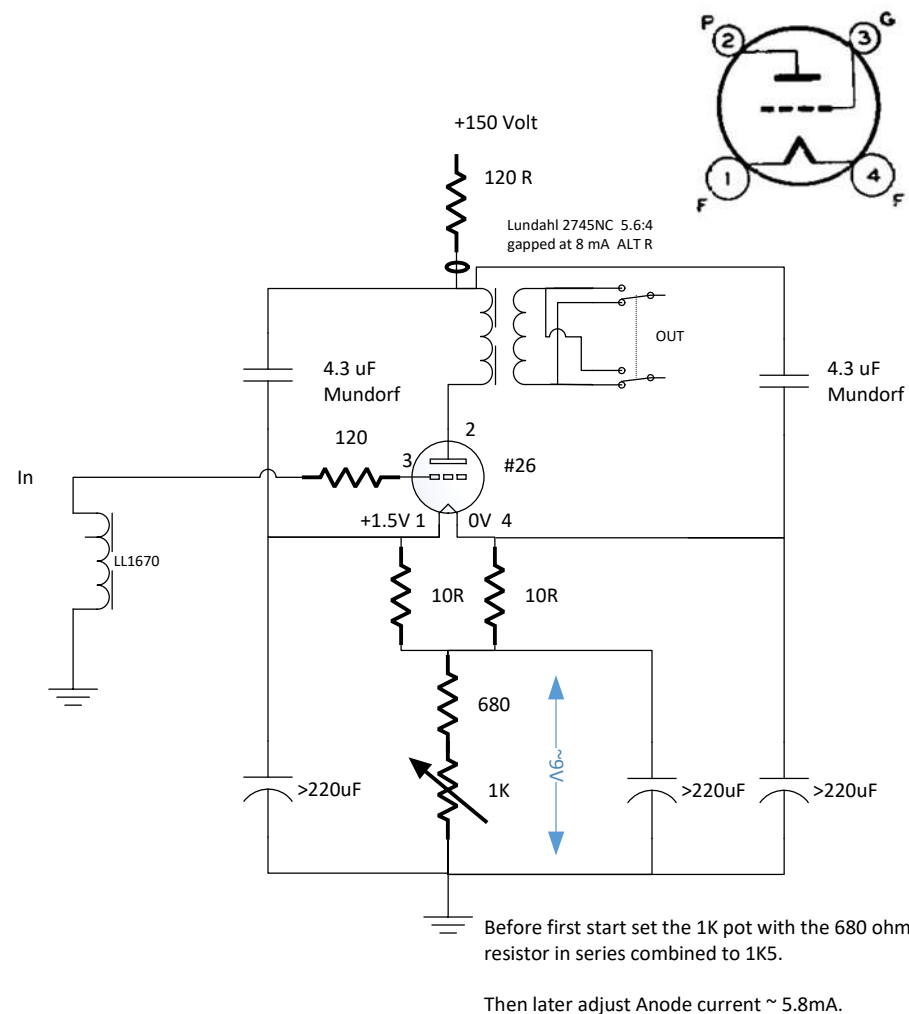

Notes:

No parallel resistor on the grid choke is needed if at the input a potentiometer of 50Kohm or less is installed.

When used as a driver amp consider installing a <47Kohm resistor parallel to the Grid Choke.

Filament voltage should be as close to 1.5 volt. Do not starve the filament, this will damage the tube.

Do not ground the output of the LL2745. This will be grounded by the power amp. Not grounding eliminates ground loops.

#26 pre amp
