TELL YOUR SENATOR HOW YOU LIKE RADIO

IT MUST BE DONE TO GET MONEY TO CLEAR AIR

Radio Inspectors and Government Laboratory Lack Funds Because Law Makers Are Ignorant

WASHINGTON.—Financial recognition by congress of the importance of the Radio industry to the American people would result in improved service and save the public thousands of dollars.

Money is badly needed by two branches of the government which are engaged in Radio activities of benefit to the public. These are the Radio inspection service of the department of commerce and the Radio laboratory of the bureau of standards.

What an Inspector Does

The public is more familiar with the work of the Radio inspection service. Summed up, it is the duty of Radio inspectors to examine and license operators and stations, inspect the Radio equipment of ships, check up on all stations to see that they operate on the wave lengths assigned them, and to investigate cases of interference of Radio and other sources.

Since the advent of broadcasting, the duties of the Radio inspectors have multiplied tenfold. Originally intended only for the inspection of ship and commercial Radio equipment, the additional burden of looking after broadcasting stations and thousands of interference complaints has made it necessary for most of the inspectors to work from 12 to 18 hours a day.

Need Larger Force, Hence More Money

In spite of the overtime services of the inspectors (for which, incidentally, they are not paid extra) many of the reports of interference are not investigated because the time cannot be found.

The one remedy for this situation is well known to officials at Washington. It is to increase the inspection force to such proportions that satisfactory service can be rendered to the entire country. But to do this would call for money and there is where congress enters into the picture.

Congress Oversteps Budget Bureau

For the fiscal year 1927 (which begins July 1, 1926) the budget bureau recommends an appropriation of \$354,000, which is an increase of approximately \$125,000 over the appropriation for the fiscal year of 1926. Generally, the recommendations of the budget bureau are headed by the house appropriations committee and passed through congress.

One of the few exceptions in recent years applied to Radio. Last year the budget bureau recommended \$220,525 for the Radio inspection service, and shortly thereafter recommended a supplemental appropriation of around \$100,000. The first recommendation was approved. Chairman Martin Madden (Illinois) of the house appropriations committee was responsible for the defeat of the second recommendation.

Madden Cause of Poor Conditions

Mr. Madden's opposition to the second recommendation was based on the theory that Radio inspectors should not poke their noses into the business of street railway and electrical companies which create interference with their equipment. Mr. Madden was ignorant of the fact that these industries are doing their best to cooperate with Radio inspectors to eliminate interference.

What Bureau of Standards Does

The work of the Radio laboratory of the bureau of standards is also of great importance to the public, although less is known of it. There are several highly important Radio investigations which should be made immediately by the Radio laboratory but which cannot be attempted until more money is available.

For instance, methods and apparatus should be developed for measuring high frequencies. At present, no one knows how to measure these short waves. Also, the laboratory should go to work on the measurement of receiving sets and on methods and apparatus for the measurement of the power of transmitters.

Money Might Solve Fading and Static

One of the present undertakings of the Radio laboratory is an investigation of the causes of static and fading. This and other equally important investigations are moving very slowly because of lack of money.

The recommended appropriation for the Radio laboratory for the fiscal year 1927 is around \$50,000. To do justice to several investigations which should be started immediately, the Radio laboratory should have at least \$200,000.

The only thing fans can do about it is to write their senators and representatives in congress immediately, expressing their wishes in the matter.

That is up to each individual listener.

GIRL ON OUR COVER IS SINGER AT WEAF

"WHERE IS the Child?" That question doubtless will be asked many times when Radio Digest readers first behold the Madonna-like picture on our cover this week. The soulful eyes, the oval face, the black wavy hair and the suggestion of a halo in the dainty bit of silken cord with which it is tied may very well have been the subject for the brush of a Leonardo da Vinci, Titian, Murillo or Rembrandt.

However, the lady is not an artist's model. She is herself an artist in the musical world. Her name is Miss Joan Ruth and she is a member of the Metropolitan Opera company. She was born in Boston and made her debut in the Wagnerian Opera company at the age of 19. She has a coloratura soprano voice and has been heard over the WEAF chain many times.

Irish Free State Station to Be Broadcasting by Easter

DUBLIN.—At last there is to be some real broadcasting from the Irish Free State and, in fact, the Free State government has been advertising for a station director, musical director and engineer for the new Dublin broadcasting station.

Some have made so bold as to state that the station will actually be sending out preliminary test programs within a couple of weeks.

It is entirely possible that Dublin will be on the air around about next Easter.

Offer Prize on Best Plans to Help Radio

German Paper Gives 200 Marks to Stimulate Research

BERLIN, Germany.—The German Radio paper, "Radio Unschau," published by Bechhold in Frankfurt, is offering a prize of 200 gold marks for the best solution of the following problems.

1. An apparatus for making audible sounds not usually perceptible, such as pulse and heart beats, cell growth in plants, etc.

2. A practical and simple way of measuring directly capacities and inductances.

3. An appliance for measuring infinitesimal lengths, breadths and weights, down to the thousandth parts of millimeters and milligrams.

Solutions, which should be accompanied by illustrative drawings or photographs, should reach the editor before February 15. There are no restrictions placed on competitors.

Combine for Elimination of Electric Line Interference

SPOKANE, Wash.—Representatives of the Washington Water Power company at Spokane, Wash., and the Radio Listeners' association conferred recently to form plans to reduce to the greatest minimum any interference that may be caused from the company's electric lines. Both the company and the association will maintain interference experts and cooperate to clear the air. Much of the interference that has been laid to high power lines was admitted by both sides to be due to the lack of knowledge of the listener.

Looking Ahead

Distinguished Radio Artists and Famous Notables Booked for Appearance at the microphones of leading European stations, will be shown in pictures, and a forecast of what they are to do will be shown in a double feature page in the Radio Digest of next week.

Sitting on Top of the World comes just about being true for the Pike's Peak Broadcasting company which sends an expedition to the lofty summit to see the old year out and welcome the new year in. When you listen to KFXF you are "sittin' high and pretty." Pictures and story next week.

Guns and Gas Almost Stripped the Life Clean Out of Zingaro, a Pennsylvania anthracite miner. So he left the black pits of the underground, packed up his portable typewriter and his Radio set and boarded a rambling box car for Montana, to live in the open. Read what happened to him in the next Radio Digest.

Milo Gurney's A. B. C. Radio Fundamentals will next take up the actual media used to transmit intelligence, voice and music through the air and ground. Learn of the mysteries of the carrier wave and modulation.

Setting up and Operating the Stewart-Warner Receiver is next in the "Operating and Trouble Shooting" series. The discussion of this handsome, metal panel outfit of the tuned radio frequency type should prove of interest to all.

The Unitrola Phonograph Set progresses through the stage of panel drilling and assembly in Carl Patterson's second article. This set is different in use, design and results. With the make of parts named and exact dimensions given, no one should have trouble in constructing it.

NEWS BRIEFS FROM THE BROADCASTERS

MASS. TECH. RADIO DINNER ON AIR OVER RCA CHAIN

Pan-American Musicale Saturday at WRC—Helen Jane Upperman Returns to Sing at WSAI

On Tuesday, January 19, a Radio dinner by the Massachusetts Institute of Technology will be held at Boston, where important proceedings concerning the future of Radio will be revealed. This meeting of interest to fans will be broadcast by the RCA chain of stations, consisting of WJZ, WRC, KDKA, WBZ, KFKX, and WGY.

Pan-American musicale are popular with fans of both Americas who are able to hear WRC, Washington. The next program scheduled by the Pan-American union will be held Saturday, January 16. Franklin Adams, counselor of the union, is the director. Alfredo Oswald, Brazilian pianist, and Clara Mena Sanchez, Mexican soprano, are two of the artists starred.

Helen Jane Upperman, who gained her start toward fame as a coloratura soprano through Radio, returns to her home station, WSAI, Cincinnati, to broadcast a recital Monday night at 10 p. m., central time. This young singer was singing over WSAI when the famous New York composer, Frank LaForge, heard her. Since then Miss Upperman has been studying with Mr. LaForge. She plans to study in Europe next year.

Yale university contributes a fine organ concert to the Sunday 5 p. m., eastern time, programs of WTIC, Hartford. Prof. Harry Benjamin Jepson, organist, is the professor of applied music at this university. He is unquestionably one of the leading organists of the country.

Ricketty-Racketty Minstrelsy, from KGO, Tuesday night, January 19, is aimed to make Radio listeners get a laugh or two out of the air, following a program of classical music. Mischa Gluschnik and his orchestra, and Elsa Behlow Trautner, soprano, will furnish the music.

The literary courses given by Prof. Robert Emmons Rogers at WBZ, Springfield, have been interesting because they deal with modern tendencies. Tuesday's talk is entitled "The New Biography; the Realistic Treatment of Great Men."

Comedy drama, "A Scrap of Paper," written by J. Palgrave Simpson, will be broadcast by the KGO players, Thursday night, January 21, under the direction of Wilda Wilson Church. Twelve characters in the play will appear before the microphone.

The Radio audiences of thirteen stations located in important centers throughout the country will hear again the famous Goodrich Silvertown Cord orchestra which is under the direction of Joseph Knecht. During the past few months, the Goodrich Silvertown orchestra has made a tour of the country in order that the Radio audience might become better and personally acquainted with it. Their concerts will be heard at 10 p. m. eastern time, Thursday, through WEAF, WJAR, WEEL, WCAE, WFI, WGN, WWJ, WCCO, WOC, WSAI, WGR, WTAG, KSD, and WDAC.

"Scotch" will be on tap as the source of Scotland music from the Hotel Gibson when Robert Visconti plays a special program with his orchestra Wednesday, January 20.

Cosmo Hamilton, the noted author and playwright who recently stirred the literary and theatrical worlds with the statement that Radio would soon supplant literature and the theaters, is broadcasting a series of Radio novels through WJZ, New York, every Saturday night at 7:45 p. m. eastern time. Cosmo Hamilton maintains, and, furthermore, demonstrates at every broadcasting that a full novel can be condensed into the short space of fifteen minutes without losing any of its interest.

The latest dramatic feature of the northwest was the 4-act drama "Within the Law," given at KJR, Seattle, by the Howard Neill players.

A typical example of the use of "change of pace" in presenting a Radio program is shown by the Landay Revelers in their entertainment from WJZ, New York, 8 p. m. eastern time, Monday nights. These boys have a knack of lifting the spirits of their listeners into a carefree state with a few popular or jazz selections and then suddenly turning and pulling on their heart-strings with a sentimental ballad.

SEE FACE OVER TELEPHONE WIRE

WILL REWARD BEST OVERSEA RECEPTION

RADIO DIGEST CONTEST TO DECIDE DX CHAMPION

Pacific Coast Stations to Cooperate and Trials Promise to Be Greatest in History

Just a few more days now—only until Sunday night, January 24—and the International Radio Week transatlantic broadcasting tests will be on the air! With this good news comes more. Radio Digest announces a prize award of \$100 in gold for the best reports of European station reception by American or Canadian listeners.

Complete details of the contest will appear in next issue of Radio Digest. The contest is free and open to all and closes at midnight Thursday, February 4. In the event of a tie, prizes in all respects identical with those tied for, will be awarded each tying contestant.

Other prize awards have been announced and are given below.

The Pacific coast broadcasters will remain quiet. The Pacific Radio Trade association has withdrawn its objections to the trials.

The stage is set for a most wonderful week for people who like to twist the dials slowly for the studios thousands of miles away.

Pacific Coast Joins

At the time of going to press, 15 of the larger Pacific coast stations had agreed to keep off the air during the tests from 8 to 9 p. m. pacific time, which is 9 to 10 p. m. mountain time, 10 to 11 p. m. central and 11 to 12 p. m. eastern time. Full cooperation, it is believed, will be given by the other western stations since the misunderstandings have been eliminated.

KGO, Oakland, Calif., KGW, Portland, Ore., KFI, Los Angeles, KLS, Oakland, Calif., KWSC, Pullman, Wash., and KPWB, Hollywood, are among the larger stations which have guaranteed complete cooperation. As a result of much work and intensive pleading with the few recalcitrant stations, full success of the 1926 tests are now in sight.

Many Awards Offered

Silver cups, Radio receivers, gold medals and many other items of monetary and intrinsic value, have been announced by various organizations interested in International Radio week.

A silver cup will be awarded by the Freed-Eisemann Radio corporation to the listener logging the most overseas stations during the tests. Logs should be mailed daily, being postmarked before noon of the day following reception, to Arthur Lynch, Garden City, N. Y.

A second silver cup will be awarded by the Freed-Eisemann Radio corporation to the listener using one of their sets who is first to log an overseas station during the tests. Telegrams should be sent to Arthur Lynch, Garden City, N. Y. prepaid.

The Radio World's Fair and the Chicago Radio Show managements have also come forward with prize offers in the form of gold medals, two for fans in the area included in a 250 mile radius around New York, and two for fans in the similar Chicago area. These medals will go to the listeners in each area who send to the Radio show headquarters, 1475 Broadway,

Sport Broadcasts

This week of January 16 to 22, has many sports events on the broadcast schedule. Hockey looms second to basketball as a microphone athletic feature, while an ice skating race claims third honor. The week's basketball schedule is:

Saturday, January 16

KOAC (230.2) Oregon Aggies vs. Gonzaga, 7:15 p. m. pacific time.

KFMQ (340.7) Arkansas U. vs. Southern Methodist U., 7:30 p. m. central time.

WSUI (483.6) Indiana U. vs. Iowa State U., 7:30 p. m., central time.

Thursday, January 21

KFKU (275) Kansas U. vs. Oklahoma U., 7:30 p. m. central time.

Tuesday, January 19, is the date of the Boston Bruins vs. Montreal hockey game at Boston. The game, called at 8 p. m. eastern time, will be broadcast via Westinghouse Station WBZ.

Monday, January 18, from 8-10 p. m. eastern time, the Metropolitan indoor ice skating championship races will be broadcast from Madison Square Garden through WNYC, New York, N. Y.

CAN CHECK ON YOUR CHARLESTON CHAMP

CHICAGO.—Plans are being arranged by the officials of WMBB whereby the returns of the national Charleston contest, to be held February 8 and 9, are to be broadcast from WMBB. The programs will be picked up by receivers, tuned to 250 meters, installed in the ballrooms throughout the country having contestants entered in the national contest. Dancers in the various cities may keep in touch with the success of their representative dancers.

PROVES RADIOTELEVISION IS BUT STEP FROM ACTUALITY

Edmond Belin, French Scientist and Inventor, Astounds Watchers as Image of Man Ten Miles Away Is Seen on Screen

BY F. M. DELANO

PARIS, France.—Television, the seeing of distant things and persons by wire, and Radiotelevision, the same without the use of wires, is about to become a practical invention instead of an inventor's incompleated dream. For years Edmond Belin, French scientist and inventor, has been perfecting, improving, thinking—and at last he is almost ready to give his device to the public as a finished product, foolproof, and ready for every day usage.

Mr. Belin's experiments came to public notice and acclaim just recently when he invited journalists and the French Photographic society to witness a television trial. It was successfully held between this city and his Malmaison laboratory, 10 miles distant.

See Aide 10 Miles Away

The inventor rang his assistant there on the telephone, fitted, of course, with the Belin device. The assistant, Louis Lumiere, answered and as he did so, his smiling aide's face became visible on a small screen attached to the instrument at Mr. Belin's end of the wire. There the scientists and newspaper men were gathered. They gasped in amazement at the demonstration.

Principles of Radio will be employed in the final public adaption of the device, Mr. Belin said. Only a few difficulties of Radio electricity must be overcome, he continued, before the television attachment can be placed on the market or applied to existing telephone systems.

The final step, from wire television to Radiotelevision—without any conducting wires—will be just as easy, although perhaps not so private in nature, according to the inventor. The Radio device is almost perfected now.

Belin Describes Invention

"Here is a description of the device," Mr. Belin said, as he stood before the apparatus. "Twenty silvered facets are mounted on a vertical steel disc revolving at the tremendous speed of 4,000 revolutions a minute. These revolve before the luminous ray of a small but powerful arc light in front of which is placed the person, thing or photograph whose image is to be transmitted."

"The facets, by the intermediary of a tiny hole, transmit the decomposed image point by point. In other words, the image is broken up into tiny points of light at the rate of 250,000 each second. These light dots are transmitted to a screen by a series of mirrors—25,000 dots every tenth of a second—and register so rapidly that the first are retained on the retina of the human eye while the last are being shown. It is similar to motion pictures where 10 photographs per second give the illusion of movement."

Long Distance Radio Movies Next

"I will overcome the last remaining obstacles within a fortnight. I can transmit the figure or face of a person speaking to London, as there is no limit by distance once the principle is established."

"Before the end of 1926 I expect to perfect the invention so that a person speaking may send his likeness around the world by Radiotelephony. Eventually we shall have long distance movies, with everyone possessing a screen at home."

Reeves Hears Argument on Alleged Monopoly of Radio

WASHINGTON, D. C.—Argument was heard in connection with the complaint alleging a Radio monopoly, on January 11 in New York city, before Examiner Reeves of the Federal Trade commission.

During the early days of the taking of testimony in New York by the commission in its case against the Radio corporation and others, counsel for the defendants made a motion that the case be dismissed. At that time Examiner Reeves announced that he would place the motion before the full commission.

The commission has instructed Mr. Reeves to rule on the motion himself and in accordance with this, he is hearing further argument.

LIBERTY BELL IS HEARD OVER AIR

TOO BAD the WEAF chain didn't pick up the Liberty Bell and broadcast it on New Year's Eve. WIP, Gimbel Brothers, originated the scheme, invited other broadcasters to participate, and finally, after none accepted, carried out the project alone. The audience would have been greatly increased, when Mrs. W. Freeland Kendrick, above, wife of the mayor of Philadelphia, tapped the bell, had some of the chain, relay or other broadcasters helped carry the peal of American independence to every state in the Union. Let us hope that sometime this year, the 150th anniversary of our independence, the famous old bell will be heard over more microphones.

New York city, the best reports of their success in reception of the overseas programs. One medal in each area will be for fans using factory built sets and the other will be for home built sets.

In each of the contests mentioned above, the same condition holds, that in event of a tie, an identical prize with that tied for, will be awarded to each tying contestant.

All ready? Dust off the condenser plates. Get the aerial in good condition and don't forget to look over the ground connection. While you're at it inspect the batteries—or the eliminator—for you can't get Europe without current, and then—Let's listen!

German Barristers Unite to Study Legal Phases of Radio

BERLIN, Germany.—The rapid development of Radio has led to the discovery that it has a legal side, and questions connected with it are increasingly coming into the courts. At a meeting of German lawyers interested in Radio, it was stated by the chairman that "the ignorance of Radio matters displayed at times by judges is appalling," and it is resolved to form a Radio Legal association for the purpose of studying the legal aspect of Radio and of helping with proper advice contestants before the courts and the courts themselves.

International Test Programs

COMPLETE, exclusive and special programs for the week of January 24 to 30, inclusive, for every European broadcasting station participating in the international tests, will appear in advance in the next week's issue of Radio Digest. Pictures and stories relating to European stations will appear as well in this special issue. Radio Digest staff correspondents in Great Britain and Continental Europe will give American listeners the best information obtainable anywhere on the international tests.

Wave lengths, hours, descriptions in detail of each number to be broadcast by European stations—all this and more will be found in the next issue of Radio Digest. Be sure to reserve a copy at your newsstand. The special International Week issue will be in great demand.

International Radio Hope for World Peace

Here they are, listeners, some of the folk you will be trying to hear speak and sing across the Atlantic and the American continent during the week of January 24-30. Have this page before you when you are trying to catch 2LO, London, England, because four of the quintet at the left are regular staff members of that station and are expected to have a part on the overseas program. They are known to European listeners as (left to right) Miss Sophie Dixon, J. Jefferies, Rex Palmer, Arthur Burrows and Captain C. Lewis. (Mr. Burrows is now director of the International de Radiophonie at Geneva). Keystone View Photo

Below is a scene in the Radio Paris, Paris, France. The lady is Mme. Georgette LeBlanc, former wife of Maurice Maeterlinck, who charmed the famous author with her voice. Jaques Catelain is pointing at the microphone. Robert Tabuis is beside Mme. LeBlanc and then Marcel L'Herbier.

ONE of the most important peace conferences in the history of the world will be held during the week from January 24 to January 30.

It will be a wide-open meeting. There will be no secret bargainings, no whispering behind soundproof doors, no petty dickerings between ambitious statesmen for personal gain. The citizens of the world will sit at the universal table. Master of Ceremonies International Broadcast will conduct the conversations—the most of which will be set to music.

The week of international broadcasting will be one of many such events in the years to come. The peoples of all nations will have an opportunity to hear and understand their neighbors across the international boundaries. All the world courts and leagues of nations will fade into insignificance compared with the intimate personal knowledge that the plain everyday citizen will have of his neighbor of another government.

Music and courteous felicitations will pave the way for kindly and respectful feelings. Armaments, disarmaments and military activities will be taboo at the international Radio table.

To those who have followed the series of articles written by Fred Smith, former director of Station WLW at Cincinnati, as they have been published in Radio Digest, describing conditions as he found them

during a tour of the Radio stations in European nations, the international broadcasting week will come as a natural sequence.

In America we have become nationally organized by good will and mutual understanding. In Europe a similar union between Radio broadcasting interests has been established in the International de Radiophonie bureau at Geneva, Switzerland. Arthur Burrows, former comptroller of the British Broadcasting company, is the director general. Concerning the phase of a better international understanding through the medium of the Radio, Mr. Smith wrote:

"The bureau is working with clear vision toward a

beautiful future for Radio in Europe, and probably the world entire. Mr. Burrows expressed to me most earnestly the hope that the Office International de Radiophonie would, before long, have the pleasure and privilege of freely exchanging views with an organized body representative of the great American movement.

"The Radio bureau at Geneva does not have as one of its purposes the definite effort of human intelligence to bring about a closer understanding among the nations of the earth; it is purely and simply the expression of a practical need among the broadcasters of Europe to settle such questions as the allocation of

wave lengths. Nevertheless, an examination of the work it has already accomplished and a study of its plans for the future will reveal at once the natural tendency of the influence of such an institution to be directly in line with a fulfillment of the idea to quicken the understanding among European nations, and bring them into more harmonious relationships.

"Radio broadcasting with at least one international language already accepted—music—tears down boundary lines, or rather ignores and passes them over. The German programs feature the music of Puccini, Verdi, Saint-Saens and other Latins, while from Rome are heard echoes of Beethoven and Wagner, and from Spain comes a festival of Bohemian music.

"But the bureau at Geneva is planning to go much further than all this. It means to serve practically the artistic needs of its members. One of the definite jobs of the bureau is to go about finding ways and (Continued on page 24)

Mid-ocean tests will be made aboard the liner France (left) during the international broadcasting week by Eric H. Palmer of the Freed-Eismann Radio corporation. Mr. Palmer has conducted similar tests of reception in his "globe-trotting."

Children Hear Monks and Dogs on the Air

"Well," said Jiggs (below) when he was handed the microphone, "the widow Jocko and I were not making love. 'Twas just a little friendly discussion as to the mistakes of our ancestors that puts us monks in cages nowadays." At right is Big Brother Bob of WEEI, Boston, and his Big Radio Dog. The dog is making his bow-wow for the children's hour.

WITH MOTION pictures, zoos in the city parks and practical facts about natural history in the schools, children are becoming almost too sophisticated for such stories as the Three Bears and Peter Rabbit. "Purely imaginary," says Willie, with a yawn, when mother starts the pretty little tale of Goldilocks. "I grant you that bears growl and they live in the woods. They might even take up an abode in an abandoned hunter's cabin furnished in a meager way with chairs and beds. But when it comes to cooking and passing remarks such as, 'Who's been sitting in my chair?' and all that rot, I simply cannot believe it. In the first place bears lack the vocal equipment to articulate words devised by the genus homo. It's absurd, I might almost add presumptuous, for a presumably intelligent parent to even attempt to foist such nonsense onto the credulity of a trusting child—"

At lower left is arbor in English garden where a pair of nightingales were enticed into singing into a microphone. In the center below are three young elephants at Luna Park, New York, who can tune in a receiving set. Inspired by a basket of fish, two sea lions of the New York zoo chortled a merry ha ha song into the mike by their pool.

which have endured for generations must be preserved by some means or other. Perhaps Radio will solve the problem.

As a suggestion would it not be a sure way to interest Willie if he could actually hear real honest-to-goodness bears growling while the good story lady tells the tale? Steps in this direction have already been taken.

At Universal City, California, they have a zoo where the jungle chatter is especially animated. The least little incident starts off a veritable cascade of animal palaver that winds up with every beast trying to make himself heard at the same time. Whoever started the rumor that animals are dumb should pay a visit here. You take Jiggs, always in trouble with his family or some other monk's family. If Maggie happens to be busy with the little Jiggses at one side of the cage, Jiggs, likely as not, may be chinning with Mrs. Jocko, widow of that old coconut milk soak who passed out three months ago. Well, the Bambam monks in the next cage tune in, get excited, and jabber their opinions to every other creature within hearing until the tale, greatly exaggerated, reaches Leo, the lion. Then the whole zoo is in (Continued on page 26)

KFOA, Seattle, Toastmaster of Northwest

A milliammeter attached to the microphone stand insures proper modulation in broadcasting. At the stand is W. K. Bert (above). With him are Miss Alma Daley, soprano, and Miss Velma Case, accompanist.

PREEMINENT, on the high point at the extreme northwest section of the country, Radio Station KFOA of Seattle stands like a patriarch looking down the ether vista across the mountain tops and through the valleys of a vast domain.

It was planted there when Radio broadcasting was young, back in 1922. C. B. Williams, wide-awake advertising manager of the Rhodes department store, read of the remarkable experiments and discoveries of Radio telephony in the east and argued that "what is good for easterners is just as good for the people of Seattle and the Pacific northwest." In May of that year the first program was broadcast from the Rhodes store and the station was given the call letters KDZE.

Appreciation was instantly manifested. Letters of acknowledgment overwhelmed the little 50-watt station. Carl E. Haymond was appointed director. In a few months it was obvious the time had come for expansion and in July of 1924 the station was on the air with 500 watts. This, too, became inadequate and the following March operations ceased until a new 1,000-watt station could be installed. It had now taken on the title KFOA. The one kilowatt station was introduced last September.

KFOA is conspicuous in many ways. It is more than a mere entertainer. It is sort of a toastmaster at a general assembly of Rotarians, Kiwanians, Lions, chambers of commerce and educational institutions. It broadcasts their luncheon speeches. It carries on for Babbitt through the air. Anything for a bigger and greater northwest reaches the multitude through the big Rhodes store Radio.

It also is a Samaritan, going to the bedsides of the broken-down heroes who have made the Pacific northwest what it is today with special programs for their benefit.

In this way through its sincerity of service the station has surrounded itself with a substantial clientele. KFOA prestige is unquestioned because it is endorsed by and identified with the most influential households throughout the territory. This

has reflected favorably toward the store which founded and sponsors it.

Many of the larger Radio stations have found it an advantage to be identified with the press and KFOA has its tie-up with the Seattle Times. The "Afternoons at Home," under the auspices of the Times are almost as popular as their Wm. F. Hoffman Concert orchestra programs, which come later and are hugely enjoyed. The Rhodes store also presents the Hoffman orchestra as a dinner hour feature. The Eddie Harkness Dance orchestra from the Olympic hotel adds to the merriment.

One of the occasional musical treats is provided by the Seattle Saxophone band, under the leadership of Gene Paul. Mr. Paul believes that the saxophone has a higher destiny than the syncopated rhythm of the "jazz." His band dwells only in the atmosphere of the classics and has attracted wide attention because of that as well as for the excellence of its technique.

According to the latest information, Mr. C. B. Williams is now the station director and Miss Mary

Gordon arranges the programs. W. K. Bert is the director-announcer for the Times programs and the Times studio. His efforts have injected a great deal of tone and spirit into the KFOA offerings for the younger generation. Among the favorite artists are Miss Alma Daley, soprano; Miss Betty Brandeberry, violin; Miss Velma Case and Miss Fidelia Burgess, pianists. KFOA microphone stands are equipped with milliammeters which register a check on the intensity of the vibration and warn the broadcaster whether to modulate or accentuate—an original idea. Paul B. Gale is the engineer.

The Rhodes store station also has been favored for the trans-continental hook-ups in important national broadcasting, including the current Atwater Kent programs from New York, the auction bridge series and presidential speeches.

If greatness comes through the degree of service rendered, then KFOA is well located and well deserving of its high esteem. It is a veritable watchtower keeping a vigilant eye on the world and bringing to the people it serves the good things of the earth that may be conveyed by the ear. And when the great international tests come within the next few days KFOA will be one of the foremost to help bring the voice of Europe to western America.

Saxophones are entitled to a higher sphere than jazz and syncopation declare Gene Paul (right) and his Seattle Saxophone band. Hence they play only the classical airs for Rhodes store station, KFOA. Miss Betty Brandeberry (below) with her violin and Miss Fidelia Burgess are favorite artists here.

Listeners of KFOA will be interested to see the heart (above) which pumps the energy that brings them the voice of Seattle.

Soldier Sentiment Wins Love for WMCA

One of the Thursday evening treats over WMCA is the voice of Miss Kay Macrae (above). Louise Bave (in circle) selected by Toscanni for her wonderful voice, and Arthur L. Lee, managing director of the Hotel McAlpin programs.

From Paris, Texas, to Broadway, New York, was the route taken by the exceptional voice of Miss Lois Mayer (below). She is a favorite with WMCA listeners and sings in several languages.

RETURNING officers of the A. E. F. who stopped off in New York for a few days before continuing to the home town and the business of John Citizen, had a favorite rendezvous at the Hotel McAlpin.

During those surging days, up to and shortly after the "Big Parade" down Fifth avenue with General Pershing at the head on a prancing steed, this famous hotel might have been mistaken for a field marshal's headquarters. Many a brilliant party was held there with the bright lights glinting from gold and silver emblems and the polished sheen of military boots. All tears were wiped away. Only merriment and happiness reigned at glad reunions between the welcoming loved ones who had come from distant states to the water's edge and the victorious heroes.

On swept the endless throngs through the marbled walls and the glitter of myriad lights. Pent up yearnings through long months of stress and strain found their first relief within these portals.

Somehow all of this overflow of throbbing hearts, this pageant of brawny shoulders and flashing arms, smiles and kisses seemed to leave an impression on the shining walls, the portieres, the brass and wood of this mammoth tryst.

Under the cold external walls there appeared to be a tender warmth. These countless tumults of emotion had seemed to leave a tremor of feeling in the inanimate things. And as the smart uniforms slowly disappeared from the array of the procession that moves on and on through the doors that never close, it seemed that invisible fingers stretched forth to beckon and recall.

And even before this momentous episode had dissolved into history the invisible fingers did go forth to touch and recall the days that had been. They stretched forth to the very hearthstone where John Citizen had gathered his loved ones about him. They found him from the borders of the Dominion to the banks of the Rio Grande.

* * *

On Washington's birthday, 1920, two skeleton towers in Hoboken, N. J., waited to the ether lanes the first program to be broadcast from Radio Station WMAC, located on the roof of the Hotel McAlpin, New York.

Lieutenant Americaine, late of the Lost Battalion, now rendering service in the engineering department of the Pennsylvania railroad at Philadelphia, made with his own hands the intricate receiving set he had presented his bride for Christmas. With two head phones they sat in their kitchenette apartment and listened for the new station, WMCA, coming over 341 meters from the hotel where they had met after a year and a half of absence the year before.

They heard the voice of Snedden Weir, program director, come drifting down, to them from the distant night and it all came back to them—the scenes, the dance, the music that had been the sweetest ever heard. And they were happy.

Instantly the voice of this famous hotel became popular throughout its wide range. Launched on 500 watts it performed miraculously. It was but a step to the Roaring Forties where the new sensations of Broadway were singing and playing their various ways into favor of the fickle public. Would Radio enhance or deter the

Samuel Siegel (above) makes mandolin playing a fine art and brings it to WMCA audiences after 20 years' absence. At right, Mme. Clara Novello Davies, leader of the Artists' choir at McAlpin.

"That Girl Quartet," nationally known, was organized and directed by Miss Harriette Keyes (right) one of the featured artists of WMCA. Benar Barzelay (right) famous Polish violinist heard from WMCA.

SINGLE SET SERVES 200 LOUD SPEAKERS

FORT LEAVENWORTH RUNS NOVEL ARRANGEMENT

Daily Program Picked Up from 2 P. M. to 1 A. M. Is Provided Community Through System

By B. W. Land

LEAVENWORTH, Kan.—At 2 o'clock each afternoon, a sergeant in the office of Capt. H. Burkhead, post signal officer at Fort Leavenworth here, tunes in an ordinary Radio receiving set. At once an audience of approximately one thousand persons in several hundred houses throughout the army post cut in to enjoy the regular afternoon concert over individual loud speakers.

The simple turning of a switch in the homes brings in the air program over the speakers. There is no other equipment in the homes. There are 200 of these loud speakers in Fort Leavenworth being served from this single receiving set. A thousand homes could be as easily accommodated, according to Captain Burkhead.

Set of Unusual Design

How does he do it? The arrangement looks simple enough, but it required much study on the part of the signal officer before he had his system perfected. Last year Captain Burkhead had a few loud speakers about the post. This fall he started with 25 speakers and has added 175. His capacity to extend the service is limited only by the number who wish to be served with Radio without the bother of bringing in the stations themselves over individual sets.

The receiving set used by Captain Burkhead is not out of the ordinary in the nature of circuit, yet it is of better grade in its assembly. It is equipped with six tubes and incorporates two stages of radio frequency, detector and three stages of audio amplification. The receiver is connected with 15 miles of wire distributed throughout the army post and it is to this 15 miles of wire that the 200 loud speakers have been connected.

Gives Listeners What They Request
"Every time we pick up a station," said Captain Burkhead, "we give it an audience of approximately 1,000. We receive programs from New York, Pittsburgh, Kansas City, Schenectady, San Francisco, Los Angeles and practically all middle west stations from the Gulf to Canada."

The sergeant who operates the set comes on duty at 2 o'clock each afternoon and remains until 1 a. m.

"The advantage of the system," said Captain Burkhead, "is that the listener receives his concert without the annoyance of having to care for his equipment. We give them what they want. Requests come to us for many features from various parts of the country."

In explaining the way in which the service could be multiplied Captain Burkhead said it was only necessary to add another stage of audio amplification for each 50 loud speakers added.

SUGGESTION CONTEST IS FEATURE OF KMOX

Cash Award Given Each Week for Best Suggestion Made

ST. LOUIS.—A suggestion department is a part of "The Voice of Saint Louis," Station KMOX, the new superstation which had its formal opening on the air on January 4. Each week the suggestions received are scrutinized by a committee appointed for that purpose and a cash award is given the best suggestion offered.

The first suggestion to reach the department, which met with general favor, was the message broadcast during the holiday week by announcer Nate Caldwell, "Watch the Candles on the Christmas Tree." This was adopted as a precautionary measure against fire.

Pipe Organs from Different Studios Picked Up for Duet

CHICAGO.—Two pipe organs, playing a duet, one of them located in the studio of WLS, Sears-Roebuck station in the Hotel Sherman, and the other located in the Barton studio, at 5 South Wabash, was a recent feature staged by WLS. Ralph Emerson, WLS organist, was at the console of the organ in the Barton studio and Glenn Rowell, of the Ford and Glenn team, was organist in the WLS studio.

By means of a "mixing board," one of the newest things in broadcasting stations, microphones in each location picked up the music played and through the transmitting plant of WLS delivered the selection as a pipe organ duet into the receiving sets of listeners.

Special Announcer for Each Program

2LO Adopts New Policy of Having Experts on Different Subjects Officiate

LONDON.—A new policy regarding announcing seems to be taking shape at 2LO. Recently Donald Calthrop, a famous theatrical producer took charge, Captain Ian Fraser, a member of parliament, officiated the following day, and he in turn was followed by Plunket Greene, a well-known musician.

Each one of these eminent persons officiated at a program with whose subject he was particularly familiar. Consequently he was better able to explain the various items than the regular announcer.

The British Broadcasting company believes a man who has the special subject of the evening at his fingertips, at once takes listeners into his confidence and can hold their attention for the rest of the program.

WANTS TO REDUCE SNOWBALL TARGET

THE morning gymnastic classes conducted by Arthur Bagley and broadcast by WEA, WCAP and WEEI have gained adherents for many and varied reasons, but that there are still some arguments previously unknown which induce Radio listeners to arise early and cavort about under Mr. Bagley's direction is indicated in a letter just received by WEA. A gentleman in New Jersey requests an exercise chart in order that his "bay window" may be reduced during the winter months and his prominence as a snowball target diminished thereby.

Crystal Sets Losing Out

LONDON.—The enormous popularity of the crystal set in England is at last on the wane, chiefly due to the comparatively low price of tube sets. The British fans find the tube set is worth having to bring in the Continent's programs.

Ascend Pikes Peak to Greet New Year

Intrepid Mountain Climbers Welcome in 1926 with Pyrotechnics from Summit as Is Custom

COLORADO SPRINGS, Colo.—The Old Year was bid farewell and the New Year was ushered in in many unique ways, but to the Adaman club goes a moiety of the laurels. The organization is composed of expert mountaineers, who, annually climb Pikes Peak New Year's Eve to hold a watch party on the summit. A gigantic display of pyrotechnics was used which was visible 100 miles and the street lights of Colorado Springs blinked off and on to return greetings to the intrepid climbers.

A specially constructed Radio was taken on the trip and Station KFXP, the Pikes Peak station, from where the flares and skyrockets were plainly visible, told the world that the mighty peak was once more conquered.

It's Easy to Build A Powerful Set

Using the New and Improved FRESHMAN "TRF" Low Loss Kit

Straight Line Wave Length Condensers With Low Loss Self Balanced Coils

These are the identical units which have made the FRESHMAN MASTERPIECE factory built Receivers the World's Greatest Radio Sets

RADIO BILL HEARING SET FOR JANUARY 18

ALL INTERESTED WILL BE ABLE TO GIVE VIEWS

House Merchant Marine and Fisheries Committee to Hear Proposed Measure by Rep. W. H. White

WASHINGTON.—A tentative date of January 18 has been set by the house merchant marine and fisheries committee for hearings on the White Radio bill. Extensive hearings are planned and all those interested will be given an opportunity to express their views.

It has not yet been decided whether Secretary Herbert Hoover will appear before the committee to testify in regard to the Radio bill. The secretary has been asked by the committee for his views but it is not known whether he will appear personally or whether he will forward a written statement.

Howell Introduces Bill

Senator Howell, of Nebraska, has introduced a bill in the upper house "reaffirming the use of the ether for Radio communication, or, otherwise, to be the inalienable possession of the people of the United States and their government, and for other purposes." The bill has been referred to the senate committee on interstate commerce.

A similar bill was introduced at the last session of congress by Senator Howell. It was passed by the senate, but when the house took up the Radio bill, that section declaring ether free as contained in the senator's bill was incorporated, and the whole reported out by the house committee but no final action was ever taken on it.

FRENCH GOVERNMENT PLACES TAX ON SETS

Action Seems to Indicate State Monopoly of Radio

PARIS.—The question uppermost in the minds of 700,000 French listeners for the past three years—"Will there be a state monopoly of broadcasting?"—has been settled, the state virtually accepting the trust through its recent declaration of taxes on receiving sets.

The new taxes on receivers are: 60 francs (about \$2.50) for the first year, and 50 francs for the succeeding years on all tube sets; and 20 francs for the first year and 15 for the succeeding years on crystal sets.

There is a drastic provision that listeners must pay 10 times the amount due if they are found to be evaders.

"OVER THE WIADUCT DOWN BY THE WINIGAR WORKS"

The Boy Scouts of San Francisco have given 50 Radio sets to the poor blind folk of their city in living up to their code to do good turns. If each set causes the happiness the one below does, what joy they've spread.

John Welsh, Magnus Billberg, Neils Peterson, (left to right) blind men who received sets, and Joe Chamberlin, scout leader who installed their receiver.

OVER the wiaduct down by the winigar works in San Francisco, live three blind men in an abandoned horse car. By day they ply their various arts of intriguing stray coins from passing pedestrians. One sells lead pencils, another plays a wheezy organ and the third uses his voice to advertise a newsstand located some distance from the more prosperous marts of trade.

Some days are fair, others are not. But

fair or foul, the three cronies find their way back to the abandoned horse car. A brigade of Boy Scouts set out a few weeks ago, to find wherewith and whereupon to bestow the daily kindly deed required by the Boy Scout code. The three blind men were discovered huddled together in the car by Scout Leader Joe Chamberlin.

They were found to be quite normal beneath their shirts and not at all like the original carborundum gent of the "winigar

works" song. The boys brought in an old iron bed and a few kitchen utensils. By degrees they got the three old fellows organized on a housekeeping basis. Then as a final act of mercy and kindness, the scouts installed a Radio set at the head of the three-in-one bed. The horse car has become a palace car and one pal minds the dials, while the other two by turn are lulled to peaceful sleep. Many hours of the old men's lives are brightened.

WMBB Orchestra Solves Big Broadcasting Problem

CHICAGO.—According to the reports from observing listeners, WMBB is one Radio station which has solved the problem of broadcasting an orchestra properly. J. B. Lampe, the director, has placed the musicians of Dell Lampe's Trianon orchestra in such a position that each instrument not only maintains its proper balance in the orchestra on the air, but also produces its own share of the music for the dancing.

CREATE OFFICE TO GIVE FARMERS AID

Department of Agriculture Will Keep Bureau to Send News to Rurals Through Ether

WASHINGTON.—With the appointment of Samuel Pickard, director of the Radio broadcasting station of the Kansas Agricultural college, to the newly-created position of "chief of the Radio service" of the United States department of agriculture, Radio now assumes a status along with newspapers and government bulletins as one of the major mediums for distributing agricultural information. Mr. Pickard will be under N. A. Crawford, director of information.

Farmers will be able, through the use of head phones, to receive instructions and helpful suggestions for successful farming fresh from the department of agriculture at Washington. Weather forecasts and market reports will be broadcast through a large chain of private stations and, in addition, the various bureaus of the department will prepare and broadcast popular talks relating to agricultural subjects.

MUSIC GIVEN MOST TIME ON WRC MIKE

CLASSICS HOLD LEAD OVER POPULAR PROGRAMS

Seventy-Two and One-Half Per Cent of Broadcasting Devoted to Playing of Music

WASHINGTON, D. C.—Music, with the classics holding a slight lead over jazz numbers, still constitutes the major portion of the broadcast entertainment from Station WRC, Washington, according to a check made on the station's broadcasting for one week.

Approximately 72½ per cent of the station's time during the week was devoted to broadcasting music, while the remainder was shared by talks, church services, travelogues and time signals.

290 Different Selections 301 Times
In all, 290 different musical selections were played 301 times from WRC in the 42¼ hours that the transmitter was in operation. Of the total number of selections, 172 were classical and 129 popular.

Despite the complaint that too many of the classical numbers are played and sung too much on the air, only one of the non-jazz compositions, "O Sole Mio" was heard more than once during the week. "My Heart at Thy Sweet Voice," "The Rosary" and Massenet's "Elegie," generally considered among the most over-worked compositions, checked in only once each in the seven days.

How Time Was Used

Of the popular dance numbers several were played as many as three times, including "Want a Little Lovin'," "Cecelia," "Brown Eyes Why Are You Blue," "Remember," and "The Vagabond King."

Although WRC is silent on Monday, Wednesday and Friday evenings and all day Sunday, the weeks total of 42¼ hours is the average broadcasting time of the station. Of this total, music occupied 30 hours and 40 minutes; 29 talks were delivered, consuming seven hours and 35 minutes; Christmas services occupied three hours; a travelogue consumed 30 minutes and the remaining half-hour was devoted to broadcasting time signals.

South Dakota Club in Drive

MITCHELL, S. D.—The Sunshine State Radio club has been organized here and is engaged in an effort to enroll all broadcast listeners in South Dakota. F. J. Purdy of Mitchell, S. D., is president. Broadcasters are not eligible for membership.

RADIO MOVIES IN TWELVE MONTHS

FRANCIS JENKINS, inventor of Radio vision and Radio movies, believes that experiments along the line of his invention during 1926, will progress to such an extent as to permit actual service before another twelve months have past.

"As to the outlook," says Mr. Jenkins, "I can only say that the groping progress which always attends revolutionary research has so far advanced as to lead us to expect that Radio vision will be put into

useful service before another twelve months have passed."

In recent tests of Mr. Jenkins' invention, a moving picture and a verbal description of the picture were received at the same time. The pictures and words were transmitted on the same wave length and were separated on the receiving end, different electrical capacities being used in conducting the words to the loud speaker and the pictures to the picture cabinet. He is shown above with his invention.

Musical Background to Accompany 'Notices'

KFWB Adopts Screen Method for Poems of Publicity

HOLLYWOOD, Calif.—The latest thing—painless announcements! Most stations have a great many announcements of one kind or another to make, which have to be read yet tend to drive the station's audience away. Charlie Wellman, manager of KFWB, Hollywood, has borrowed a leaf from the pianologue and now renders his announcements about the firemen's ball and similar diversions with a musical background furnished by Ray Bailey's trio.

Ray Bailey's trio is one of movieland's famous orchestras that furnishes emotional music for the taking of our best screen dramas. The difference between playing for the screen and for the microphone, according to Ray Bailey, is that on the sets the actors do the "emoting," while on the air the audience is supposed to do the job.

At any rate, instead of tiresome announcements from KFWB, we are now to get poems of publicity, Charlie Wellman and Ray Bailey collaborating.

Many letters have shown approval of the innovation.

'KILOCYCLES' ARE IT SAYS GOVERNMENT

'KILO' LIKED BETTER THAN METER WAVE LENGTH

Bureau of Standards Issues Table to Help in the Conversion of Radio Frequencies

WASHINGTON, D. C.—There is increasing tendency in Radio to express radio frequencies in kilocycles, rather than wave lengths in meters. "Kilo" means a thousand, and "cycle" means one complete alternation. The number of kilocycles indicates the number of thousands of times that the rapidly alternating current in the antenna, transmitting set, or receiving set repeats its flow in either direction in one second.

The bureau of standards has just issued a "Kilocycle Meter Conversion Table" in chart form. The table is printed on a single sheet of cardboard and can be posted in a convenient place for ready reference.

The table gives accurate values of kilocycles corresponding to any number of meters, and vice versa. The table gives values for every 10 kilocycles or meters, and is entirely reversible; that is, for example, 50 kilocycles is 5,996 meters and also 50 meters is 5,996 kilocycles. The range of the table is from 10 to 10,000 kc (10,000 to 10 m) and this can be extended in either direction by changing the decimal point.

Editor's Note.—Beginning next issue Radio Digest will give the kilocycles frequency of each station listed in the advance programs. This will be in addition to the wave length in meters listing. The meters listing will be followed by the kilocycles listing, thus:
"KDKA (309.1m-970kc) . . ."

WLS Now Broadcasts Symphony Orchestra

Engage Chicago Little Symphony to Give Nine Concerts

CHICAGO.—WLS, the Sears-Roebuck station, has engaged the Chicago Little Symphony orchestra for a series of concerts, in addition to those given from this station during the past several weeks.

The new contract of WLS with the Chicago Little Symphony orchestra, which is the original little symphony organization in this city, calls for nine performances from WLS between January 1 and March 19, 1926. The schedule calls for four concerts in January, three in February and two in March. More concerts may be added later.

Believing the Radio public would enjoy really good music by one of the best musical organizations in the United States, effort was put forth to secure the Little Symphony orchestra. With the cooperation of Director George Dasch and Business Manager Karl Schulte, the orchestra was induced to give Radio a try-out. This proved successful in the minds of the men who compose the musical organization.

500 FARMERS ENROLL IN BROADCAST SCHOOL

WCCO Short Course Attracts Northwest Farm Interest

MINNEAPOLIS.—Approximately 500 farmers in Minnesota and other northwestern states have enrolled for membership in the agricultural short course which the Minnesota Farm school is broadcasting from the Gold Medal Station, WCCO, Minneapolis-St. Paul, at 7:45 p. m. central time, Monday and Friday evenings.

The first six weeks of the course, during October and November, were devoted to classes in poultry and dairying. The next six weeks were devoted to classes in swine-raising and bee-keeping. Lessons in gardening and flower growing are now being broadcast.

Hockey Contests Have Firm Hold Upon Radio Audiences

NEW YORK.—Hockey has taken a firm hold on the Radio audience. Station WJY, here, broadcast another game from the Madison Square Garden last Thursday evening, January 7. This time the contest was between the Boston Bruins and the New York team, the Americans. Major J. Andrew White, who was at the microphone, states that the play was the fastest he has ever seen and he feels that until airplane polo is established this game will hold the record for producing thrills.

SUES CORPORATIONS FOR SIXTY MILLIONS

PROFESSOR Reginald A. Fessenden, shown above, of Newton, Mass., nationally known as an inventor, recently filed a suit of \$60,000,000 against eight prominent Radio corporations, charging that an unlawful combination on their part had been a restraint of trade and had lessened the value of his inventions. Professor Fessenden further alleged that they had combined to refrain from competition in purchasing patents, and applications for patents, inventions, devices, etc. He was formerly employed by Thomas Edison and is known chiefly as the inventor of the submarine signal.

Station Changes

"Experimental" licenses have been issued to the four following stations: KMMJ, Clay Center, Nebr., 229 meters, 500 watts; KFXX, Oklahoma City, Okla., 214 meters, 15 watts; WAGM, Royal Oak, Mich., 225 meters, 50 watts; WDAH, El Paso, Texas, 268 meters, 50 watts.

One Chicago station, WJJD, has increased antenna input to 1,000 watts. It is rumored that WSBC, Chicago, will also go up to 1,000 watts. The University of Oklahoma broadcaster, WNAD, reopened last week with 500 watts power.

Canadian changes consist of one addition, a 10-watt station, CFDC, at Vancouver, B. C., and one delete, CHCM, at Calgary, Alta.

All Stations to Get Temporary Permits

Will Leave Way Clear to Act on Radio Bill

WASHINGTON, D. C.—As the broadcast stations licenses expire, the Radio section of the department of commerce is simply issuing temporary permits which have no definite time to run. This means, that within the course of three months, all of the broadcasting stations in the country will be working on temporary permits.

While officials of the department of commerce are not disposed to discuss this situation, it is believed that this is being done so that when a Radio bill is passed by congress, the department will be able to put it immediately into effect, if any changes are made as to permits in the new law.

The Northernmost Station Again

OTTAWA.—Canadians protest against the statement that Longyear-City on the island of Spitzbergen is the northernmost Radio telegraph station in the world, and claim that honor for a Canadian-owned station at Aklavik, which is only some 70 miles from the polar pack-ice ring. This station, it is stated, has been repeatedly heard with great distinctness as much as 2,000 miles away.

QUICK NUT LOAF AID TO BUSY HOUSEWIFE

HOLDS BOTH CONVENIENCE AND BREAD VARIETY

Betty Crocker Gives Recipe for Making Delicious Loaf for Baking Powder Bread

By Betty Crocker

Have you heard, and do you regularly listen for Betty Crocker's Radio talks? Miss Crocker is nationally known as a home food specialist who is broadcasting from a dozen of the country's largest stations. By special arrangement Radio Digest has secured a series of exclusive articles by Miss Crocker dealing with her current Radio talks. These broadcasts are made through WEEL, WEAJ, WCAE, WGR, WEAR, WWJ, WDAF, WHT, WFL, KSD, KFI and WCCO, the Gold Medal station at Minneapolis-St. Paul. All of Miss Crocker's recipes and discussions are based upon investigations and work of herself and her assistants in model kitchens. —Editor's Note.

OUR daily bread continues to be one of the important functions of the household, even though the baking of much of that bread has been taken out of the home. In the history of the world, bread has always been the important factor, and in the centuries that have passed, the lady was the loaf giver.

The great lady of yesterday was a busy person. She literally distributed the bread to the family, including the servants and retainers. Bread was not available in those days as it is now. Few homes possessed ovens 200 years ago, and so the castle or the master's house operated the bakery. The lady of today is still the loaf giver, but the conditions under which the loaf is prepared are vastly different.

Quick Breads American Idea

In foreign lands practically all of the bread is made of yeast, with different kinds of flour and meals, according to the products grown in each particular locality. Baking powder and quick breads are quite typical of America, but are scarcely ever found in other countries.

A baking powder bread such as nut bread is much more quickly made than yeast bread. Although it does not take the place of yeast bread in our three meals a day, it is a great convenience and helps to secure variety.

Nut Bread Recipe

Here is the recipe for nut bread:

Two cups Gold Medal flour, two cups Graham or Whole Wheat flour, four teaspoonsful baking powder, one teaspoonful salt, one cup sugar, one egg, two cups milk, and one cup nuts.

Method: Sift the flour once before measuring. Mix and sift dry ingredients. The bran which sifts out of the graham flour should be put back into the mixture. Add the milk gradually. Add the well beaten egg and mix thoroughly. Add the chopped nuts which have been dredged with part of the flour. Pour into well-greased loaf pan. Let stand 20 minutes. Bake one hour in a moderate oven, 350° Fahrenheit.

HELPS WOMEN FROM STATION WGY

Miss Jessie Lane, shown above before the desk microphone of Station WGY, has won a host of followers among the housewives of the country through her interesting and instructive talks, including recipes, which she gives every Monday afternoon over the General Electric transmitter at Schenectady, N. Y.

You will notice that the bran from the mixture is put back into the mixture. Some cooks make the mistake of sifting the graham flour and then throwing away the bran that is left in the sifter. The bran is the part of the graham flour that you particularly want.

The flour should be sifted always, but not with the idea of removing the bran. There are several reasons why we sift flour. First of all, to lighten up the mixture, as flour always packs down in the bin. If the flour is not sifted before measuring, it will be impossible to secure an accurate measurement. Other reasons for the sifting process are to incorporate more air into the flour and to raise the temperature of the flour to that of the room.

Why Let Bread Stand 20 Minutes?

Perhaps you wonder why nut bread must stand 20 minutes before baking. That is

because the dough is rather stiff, heavy and in a thick loaf. We should have a good formation of gas from the baking powder before the mixture is put into the oven to bake, in order to have a light loaf.

You cannot expect to get good results if you do not measure accurately. Use the standard half pint measuring cup and standard measuring spoons. The flour should be sifted once before measuring and all measurements should be level.

Stale nut bread is delicious when toasted for afternoon tea as it is delicate and crisp. When served with marmalade or jam, it is quite a treat. Any kind of nuts may be used, except that black walnuts are rather strong for nut bread. English walnuts or hickory nuts are probably best. If you wish, you may use raisins in place of the nuts, or perhaps a mixture of half raisins and half nuts.

SHORT WAVES

By Marcella

Nate Caldwell, alias the "Joy Digger," ex-WBBM (Chicago) and now at the new KMOX (St. Louis), is a personal friend of Marcella's, although I hasten to add that our friendship is purely platonic. He's blonde, good looking and single. Went to Dartmouth college, and learned how to sing and entertain with a ukulele. His parental home is Chicago, where his father is a doctor. A year or so ago his favorite pastime was "skip-hiking," burdened only with toothbrush and safety razor. By the latter means he covered much ground and appeared at many stations. But still he's single, and only 24 years old.

Correll and Gosden come in for next number of letters of inquiry this week. Here are the important facts. WGN uses them a lot nowadays, although they have made their usual hit from many other microphones. Both are single. Correll is about six inches shorter than Gosden, who also has an edge in having curly hair. But then Correll can play the violin, so that should make up for that. He started broadcasting at the age of five minutes, about, one day at Peoria, Ill., while Gosden started the same way at Hatteras, N. C., population—599 after he left. And sh-h-h girls, BOTH are extremely sentimental! So much for Gladysce.

Paging Malie and Stept? does ANYONE know where they are and all about them? Write me, please!

Beg your pardon. I flattered Jack Little, "Little" Jack Little is really little, and 25 years old exactly. If every broadcasting artist were as popular as Jack, I'd sure have to increase the size of my weekly contribution. Of course, he's most popular with Mrs. Jack Little, and we don't think there's a chance for the rest of us. He was married, Elizabeth Ann, just last summer, or was it spring?

Adams Colhoun, the likeable announcer for WFAA, Dallas, is probably married, but I'm not sure. He's one of the few I haven't been able to meet yet, but sometime I'm going to take a train right down and shake his hand. Like him, don't you? My reason for thinking he's married is that he sounds so mellow, wise and thoughtful. Bachelors are seldom that!

"Bob" Emery was married this last summer. His wife has seen his star rise and is still watching its ascension, for she was secretary to him at old WGI, Melford Hillside, Mass., and later at WEEL, Boston, when Bob went there. These ukulele ditty songsters certainly flutter the hearts of the likes of us.

What deep secret would you like to know about your favorite broadcast star? Drop me a note, girls, and I'll do my best to answer it here. MARCELLA.

CHIMES OF LONDON RING OVER AMERICA

NEW WORLD AND EUROPE EXCHANGE PROGRAMS

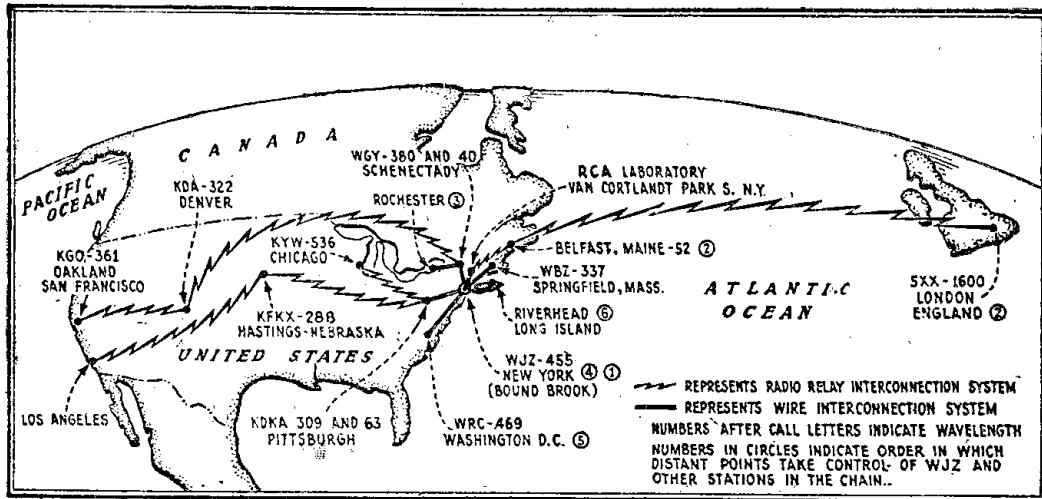

R. C. A. Stations Link United States for International Broadcasts to Celebrate New Year

NEW YORK.—The chimes of London, tolled by unseen hands thousands of miles away, resounded in millions of homes in the United States on New Year's Day. In return, a large part of the civilized world was thrilled by a special New Year's Day gala program rendered by great operatic stars and broadcast by high power from the experimental station of the Radio Corporation of America at Bound Brook, N. J., in cooperation with the group of coast-to-coast broadcasting stations maintained by the General Electric company and the Westinghouse Electric & Manufacturing company.

HOT AIR PIPES TAKE AIR MUSIC ALL OVER

CINCINNATI.—A house full of music with the furnace and heat pipes directing the sound waves through the registers of every room has been brought about by Joe Best, an employe of the Crosley Radio corporation here. Taking his set down to the cellar, he placed the loud speaker in the cold air vent and then tuned in. Shortly every room was filled with music and, according to Mr. Best, there was absolutely no directional effect noticeable.

Radio has become the art of instantaneous communication, Mr. Kent Cooper, general manager of the Associated Press, broadcast some brief news dispatches from the leading capitals of Europe. These press dispatches were transmitted to the New York office of the Associated Press by the world-wide wireless system of the Radio Corporation of America. Because of the importance of the event,

The British Broadcasting company cooperated with the American stations in the most elaborate demonstration of world-wide broadcasting ever before attempted. The Old World inaugurated the New Year's Day celebration by Radio by pealing forth a greeting to the United States from the chimes in the tower of the Parliament building in London. The New World then broadcast a program, transmitted with sufficient power to be heard clear across the seas. The British Broadcasting company intercepted the American program and rebroadcast it over the chain of stations in England. In like manner, the program was rebroadcast in Germany.

Immediately preceding the special musical program broadcast from the United States, an official spokesman from America greeted the leading countries of the world by Radio. To overcome the barriers of language, a linguist repeated the greetings in French, German, Italian, Spanish, Polish, Swedish, Japanese, etc.

To demonstrate the extent to which

which represents one of a series of high-power broadcasting experiments now being conducted by the Radio Corporation of America, through the experimental Bound Brook station, 2XAR, and the remarkable program which was assembled for the occasion, the group of broadcasting stations maintained by the R.C.A. and its associated companies were interconnected from coast to coast, either by wire or by Radio.

Listening Posts Collect Data

Official "listening posts" on land and sea were established to gather exact engineering data on reception conditions throughout the world. The information thus collected in London, Paris, Berlin, Rome, Warsaw, Stavanger, Honolulu, Tokyo and other points is expected to be of the greatest importance in determining some of the problems of Radio transmission. In the United States, data was gathered by over 10,000 designated listeners in practically every city and town in the country.

NO. 24 WIRE AND COLLODION OKEH

Bureau of Standards Soon to Issue New Paper on "Low Loss" Coils

WASHINGTON.—The bureau of standards has just completed an investigation on radio frequency resistance and inductance of certain "low loss" coils within the range of broadcast frequencies. A published paper containing the data will soon be available at the government printing office, Washington, D. C.

"The coils were of different shapes and wound with different kinds of wire," the paper will state. "Of the coils measured, the loose basket weave coil and the single-layer coil have the lowest radio frequency resistance. Number 24 double cotton covered wire is a suitable size of conductor, though numbers 32-38 Litz have somewhat less resistance. This holds for the entire broadcast range of frequencies and for all the shapes of coils measured.

"Collodion was found to be a suitable binder for holding the turns of certain shapes of coils together. There was noticeable reduction of resistance by spacing the turns of an ordinary single-layer coil."

If You Tune in Radio-Milan Let Them Know by Letter

ROME.—Radio-Milan station is making daily tests from 9:30 p. m. to midnight (3:41 to 6:11 p. m., eastern time) on a 337-meter wave length, using 1,200 watts. The request is made that listeners in picking these messages up communicate the fact, with observations on clearness, etc., by post card addressed to Radio-Milan, 23 Corso Italia, Milan, Italy.

Many Thousand Fans Visit Studios of KTHS

All the World Comes to See National Park Studio

HOT SPRINGS NATIONAL PARK, Ark.—That all the world comes to Hot Springs is strikingly illustrated from the guest register book kept in the studio of Station KTHS, New Arlington hotel, here, according to an analysis made by G. C. Arnoux, director, which shows that in the last 90 days more than 2,000 guests visited the Radio room on the twelfth floor of the hotel, coming from 37 states and eight foreign countries.

Visitors were registered from far away South Africa, France, Spain, Italy, England, Ecuador, New Brunswick and Winnipeg, Canada and Honduras.

The actual total of tourists visiting the Radio department, however, in the 90-day period is considerably more than the 2,000 names on the register, as it is estimated less than half the visitors take time to sign the book. Every variety of occupation from farmer to major general of the army and rear admiral of the navy is shown on the register.

Visitors May Watch Stars Before KMOX Microphone

ST. LOUIS.—"The Rendezvous" is a feature of the Station KMOX studios in the Mayfair hotel, St. Louis, which has met with instant favor. Every day during program hours visitors drop in for the features they prefer. The rendezvous is a large reception room looking into the studios through plate glass giving a view of the artists before the microphone. The daily organ recital from 12 to 1 p. m. central time is in great favor. This is by Arthur L. Utt, studio organist using the Kilgen organ, who gives a second program each evening from 6 to 7 p. m.

Tower

Develops New Diaphragm-

TOWER Speakers, now better than ever, are exclusively equipped with the wonderful new double Diaphragm.

Over fifty years ago Alexander Graham Bell invented the telephone receiver with its all-metal Diaphragm. This Diaphragm was for telephone reproduction. Since the inception of Broadcasting, this same general type has also been utilized—perforce—for radio reproduction.

But now, thanks to Dr. Herman Fisher, the eminent Russian Scientist and acoustical expert of the Tower Co., a distinctly new type of Diaphragm—revolutionary in principle and unparalleled in performance—has been developed.

This new Diaphragm is virtually a composite of two different materials of varying thicknesses. One portion is metal—to bring out high notes; the other portion is a special impregnated parchment for low notes. The metal, being harder, is better able to reproduce the thin, rapid vibrations while the parchment reacts to the slower vibrations which produce the deep bass notes.

Thus, in Tower Speakers, perfect tone quality is obtained over the entire musical register—in accordance with the basic laws of sound reproduction.

Tower Speakers on Sale
from Coast to Coast

TOWER MFG. CORPORATION
Boston, Mass.

We will pay \$500 cash and make 1000 additional awards for a name best describing the wonderful new Diaphragm used exclusively in Tower Speakers. Send in your suggestions—on U. S. Post Cards—before February 15th.

Only Tower Speakers equipped
with this New Diaphragm

High Lights of the Week

SATURDAY at midnight, the Alabama minstrels, said to be the greatest aggregation of entertainers ever roped, thrown and tied in a single round-up will face the microphone at WAHG for two hours of fun. In the olio will be found the Cotton Pickers quartet, Alabama Pete, the only dancer in the world who executes a triple buck, and others. This show carries the endorsement of pulpit, press and public. One night only. The frolic at KPO this same evening celebrates this station's third birthday.

Florence Austral, soprano, and Cecilia Hansen, violinist, are the Atwater Kent stars, scheduled for this Sunday over the WEAFL chain. Mozart's opera "The Magic Flute," will be the feature Sunday at KGO, Oakland. Arthur S. Garbett will talk about this great musician and the KGO Little Symphony orchestra will play the opera.

Ice skating by Radio is the latest sport event of the winter season. The Metropolitan indoor ice skating championship races will be broadcast Monday by WNYC, from Madison Square Garden. WSM, Nashville, will give a special Robert E. Lee program, commemorating this great general of the South.

The Massachusetts Institute of Technology associated clubs are giv-

ing a special Radio dinner Tuesday. This meeting will be broadcast by WJZ, WRC, WGY, KDKA, KYW, and KFKX, besides the home station, WBZ. KOA will also attempt to rebroadcast the meeting. Oklahoma cowboys will invade WHB, Kansas City, with a peppy band which will keep fans from thinking any serious thoughts for an hour or two.

Laura C. Gaudet, the little French-Canadian pianist, who won great favor last spring with her series of recitals, will begin her second series of programs Wednesday evening. Miss Gaudet was crowned laureat of the Quebec City Academy of Music in 1922. She also studied two years in Paris and Rome.

The Swiss Singing society, a renowned musical organization of the Pacific coast will be heard from KPO, San Francisco, Thursday night. Sixty voices will take to the ether from this station.

"To Be or Not To Be?" these immortal words will find their way into the ether Friday night, when the famous WGY players put on "Hamlet." At KGO, the Oakland station of the General Electric company, a Scotch program of the prohibition kind will consist of songs and poems of Scotland. Even the old-time bagpiper will play.

11	10	9	8
WLW (422.3)	Popular program.		

The sheik of the ukulele is the title given LeRoy Kullberg at KFWB, Hollywood. He is popular with the ladies whether he is seen or unseen.

The Williamson Brothers, Harold and Leo, above, have grown up with radio. Look at the handsome young men they have become. These wandering minstrels of the air can never be found at the same station very long. The last station they visited was WOAW. No wonder Roxy's gang is popular. Here is Beatrice Belkin, left, whose coloratura soprano voice is a regular feature of the group when broadcasting over the WEAFF chain.

Monday, silent night for: CHIC, CNRA, CNRC, CNRE, CNRM, CNRO, CNRR, CNRT, CNRV, CNRW, CNRX, CNRY, CNRZ, CNRA, CNRB, CNRC, CNRD, CNRE, CNRF, CNRG, CNRH, CNRI, CNRJ, CNRK, CNRL, CNRM, CNRN, CNRO, CNRP, CNRS, CNRT, CNRU, CNRV, CNRW, CNRX, CNRY, CNRZ, WEAH, WEBJ, WEBW, WENR, WGBS, WGES, WGN, WHAS, WHT, WIBO, WIP, WJAZ, WJJD, WKAQ, WLBS, WLS, WMAQ, WMBB, WOAI, WOC, WOK, WORD, WQJ, WRC, WREO.

Peace and Universal Language

THE great moment is soon to be! Our friends in Europe beginning Sunday, January 24, will attempt to make themselves heard on this continent by means of Radio broadcasting. It has been done before, true, but this year the project will be eminently more successful.

Conditions are better. Stations in the United States, Canada and Mexico are almost universally agreeing to keep silent as asked by the International Radio Week committee. Even the Pacific coast broadcasters have, according to last reports, finally agreed not to ruin selfishly the sport of many nations. Greater power will be used by the many more European stations than participated last year. Several score of English, French, German, Spanish and Italian broadcasters are now capable of being heard in America when American stations using the same wave lengths remain silent. A year ago, the number of European stations able to cross the ocean satisfactorily was limited to less than half a score.

What will international broadcasting, when realized as an everyday occurrence, mean to the world? To answer this effectively and have the prediction carry truth and weight, takes considerable thought.

One idea we have is that the exchange of programs and thoughts across the international boundary lines some time in the future is going to be the strongest force for world peace we have ever known. Most wars are caused by misunderstandings. Often these are so slight as to be classed ridiculous. If we, therefore, understand our cousins and friends of other countries—know his problems and his mode of living—we are going to be less inclined to start killing and maiming him and his brother citizens.

What we do not understand, we fear. The child fears the dark because it cannot comprehend its meaning. Savage tribes are frightened to hysterics by an eclipse of the sun.

When we understand, we do not fear, be the object darkness, eclipses or other nations.

Another thought is that of a universal language. What will it be? Can French fill the requirements? It is the language of diplomats of all civilized countries. Will the public learn to use the language of France?

No, we believe that French can never become the tongue of the world. More than likely it will be English, for the United States, England and Canada are broadcasting nightly to the world. They are broadcasting with so many more powerful stations than the rest of the world put together. Six to seven hundred broadcasters are operated by English speaking nations. Not over one hundred broadcasting stations are operated by all the other nations of the world.

English is destined, as long as this superior leadership continues, to become the broadcast tongue of the world. It will be through the medium of English that mutual understandings of peoples of other lands will be created. English may change slightly in the transposition, but not much. English is already a melting pot language.

We are cognizant that while English is spoken daily by 160 millions of people, Chinese is the only language of over 400 millions, but we are hopeful. If it is possible, by international Radio broadcasting, to permeate English through the ears of Germany, Russia, France, Spain, Italy, Portugal, Sweden, Norway, Croatia, Bohemia, Czecho-Slovakia, Bulgaria, Holland, Poland and Greece—seventeen nations—then 470 millions of people would comprehend our language.

If China, India and Japan knew our tongue, 550 million could be added to the total. The immense total population of these three Asiatic countries gives birth to the idea that perhaps it wouldn't be a bad scheme for the English nations to erect relay or originating broadcasting stations in those countries and further the use of English.

Yes, the international broadcasts, once and still somewhat of a stunt and novelty, are going to be a most commonplace happening, and their ability to bring about world peace and a universal language is very promising.

RADIO INDI-GEST

When Waves Roll In

(With Apologies)

There's a glorious, tickly feelin',
Kinda vergin' on divine,
When the new set's all connected
And you've strung the long clothes line.

There's a thrill no other instrument
Can ever make you feel,
When you turn the knobs expectantly
And hear a howl and squeal.

But the joy supreme is findin'—
Let no artist dare to scorn—
That the waves are in the ether,
And there's music in the horn.

WILL I?

Should Teach the Horses

Dear Indi: So WCAU, Philadelphia, is going to broadcast horseback riding lessons? That should be made a feature of the International transmission tests. Build up foreign friendships. The Prince of Wales ought to fall for that.

IDA HOE.

"Well, there are two sides to the question and it's pretty hard to stick to either one, so why not be considerate? You know the Prince is under trying circumstances.

And the Show Starts Right Away

Dear Indi: Here it is again! Bet you're thankful—WHAT—you don't know what I'm talking about? Can you imagine that? Why the All-Star-American program, of course. It's designed especially for internationally-inclined stations to shoot across the ocean for the benefit of our cousins overseas. Show 'em what a swell country we have. Read it and vote the straight All-Star-American ticket:

- I.
Address, "How to Buy a Pardon or Parole".....Gov. Len Small of Illinois
 - II.
Duet, "Miserere" from "Il Trovatore".....Nicky Arnstein and Fanny Brice
 - III.
Lecture, "How to Hold the Gun When Shooting Husbands".....W. C. T. U.
 - IV.
Lobby solo, "The Flying Dutchman".....Edward Bok
Accompanied at the money box by Senator Norris
 - V.
Close Harmony, a duet.....Al Smith and Wm. Randolph Hearst
 - VI.
"Come Over and Play in Our Yard," mixed chorus.....League of Nations
 - VII.
Talk, "What the Farmer Doesn't Want".....Pres. Cal Coolidge
 - VIII.
"Remember," solo.....Dicky Loeb
Accompanied by Nathan Leopold, in Joliet costumes
 - IX.
"Never Cripple, Always Kill Pedestrians So They Can't Sue".....Am. Automobile Assn. & Yellow Cab Co.
 - X.
"But You Gotta Know How," drinking song.....District 13, Chief Prohibition Agent, Ed Yellowley
 - XI.
Booster Talk, "Chicago Autos, Gunmen, Poison Liquor etc., Kill More People Annually than the Population of Florida Taken from the Florida Ads".....Chicago Assn. of Commerce
 - XII.
Hymn, "Higher, Oh Raise Me".....U. S. Assn. Skirt Manufacturers
Finale
- "My Country 'Tis of Thee".....by the Mixed Assortment Above
AN ILL NOISE ANN

Why not add, "Wings of the Mourning," from Schillings, by the Army Court Martial ensemble?

NIGHT

Thrilled am I to thus speak out into the night,
O silence infinite mysterious night!
Over ethereal paths of celestial pageantry
Vibrating in a mystic lovely unknown light
The dim light cast by nocturnal skies
O'er dreamy worlds amidst the silence deep
Messages on the wings of thought flying
Piercing the darkness and the shades of sleep.

I am living o'er a century this hour
While slowly the wheels of silence wind
Where currents of life vibrate o'er the spheres;
Thoughts terrestrial hold me and I find
Myself in cosmic consciousness
Beyond the mortal edge in unknown lands;
O silence infinite mysterious night!
God watches over all He understands.

RHEA SHELDON.

Just a Little Justice

Dear Indi: I see in last week's issue that Betty Crocker is going to give a talk on "Biscuits and Variations." What I want to know is, will the law protect me if I make my wife wear ear muffs during the program. She knows too much about variations from biscuits now. Her biscuits always vary—from bad to worse.

PTOMAINÉ

We're not so sure about the law, but almost any twelve men who have been through that stage of indigestion will. Take a chance, it's worth it.

The Finale

Condensed

BY DIELECTRIC

Station WMC, Memphis, Tenn., incorporates in the dance programs broadcast from their studio most of the modern numbers to be heard these days, and judging from the announcer's statements between selections a great many folk listen to them. This station does acknowledge telegraphic bouquets but consumes less time in doing so than most any station I know of. That is an example to follow.

Tuning in Station WEO, station of the University of Ohio, an evening's pleasure was well-nigh complete. The directors of that station have been successful in controlling their modulation so as to transmit features with a great deal of fidelity. On the particular evening in mind a concert comprising selections played on the University's chimes made one loath to pass on. Granting the possibility of these being somewhat superior, their tone as received in my set was beautiful. We must not overlook the skill of the player.

The oratorio of the Messiah was broadcast by numerous stations with more or less effectiveness. Repetition, rather prolific in this work, does not become boring where the choruses are well trained by directors who introduce a variety of phrasing. Such was the noticeable case of the production sung at WOC, Davenport, recently. The listeners' satisfaction was the more complete due to the accompaniment provided by the Palmer little symphony orchestra (another little symphony organization). Applause is due the soloists of the evening also.

Station WHO, Des Moines, arranged programs of Christmas music which were very pleasing and no doubt enjoyed by an extensive audience. The mere fact that the writer of this column was pleased signifies little, of course, so it behooves you who listened to their music to write the station expressing satisfaction—if that was felt—or adverse criticism, if you can specify the faults you consider existed. Criticism is always invaluable, where it is constructive, and especially so to Dielectric, who appreciates your comments on his efforts to properly evaluate (after years of musical experience and criticism) that which is heard by him. After all, critics differ even in their appraisal of outstanding artists. We are all human, you know.

Certainly all lovers of symphony music feel indebted to the sponsors of the broadcasting of the New York Philharmonic society's concerts, one of which was performed a short time ago and known as one of the students' series. While this was performed in Carnegie's hall, New York, and broadcast through Station WJZ, with the great power used by this station, no one could sense the artificial mediums making possible such music in our homes. Here is a body of musicians schooled in the classics and directed by leaders with international reputations.

Listeners in on the Atlantic coast boast now and then of their success in pulling in one of the California broadcasters, but the number is rather limited, comparatively speaking. To facilitate a larger audience getting Pacific programs, KFI, Los Angeles, arranged to have five broadcasting stations scattered across the country rebroadcast on a certain evening. My personal experience with this test was to find KFKX, Hastings; WOC, Davenport, and WHO, Des Moines, producing the best results. WGY, Schenectady, was foggy and of course faded miserably. Making a comparison with KFI itself during the singing by a coloratura soprano, KFKX and WOC most nearly approached the original.

ABC Radio Fundamentals for Everybody

Chapter II—Inter-Relation of Radio to Audio Telephony

By Milo Gurney

IN ORDER to complete our understanding of the close relationship existing between wire telephony and audio telephony, we have only to associate the fact that voice telephony uses air as the medium and wire telephony uses wire. Wire telephony has been shown to be identical with audio telephony, with the exception that an electric current, rather than the sound itself, was flowing through the connecting wires. This current in turn actuates purely mechanical devices capable of reproducing the wave form of the sound in the receiver.

Recognizing Air Surges

Of even greater interest to the reader is a more careful study of figure 1, shown in last week's article. In that drawing, it is evident that even an experienced eye could not judge or comprehend it as other than an artist's conception of varying air surges. Likewise, it is also apparent that the radiating spheres possess no intelligent meaning to the eye. Were it possible to convert this picture of air surges into vibrations the ear would, in turn, readily recognize them. Hence, as

Figure 5

an object is identified through the application of definite, unchangeable optical laws, in like manner is a succession of moulded air surges identified through the basic vibratory laws.

In modern telephone practice, refinements of both the means for signaling and transmission are continually taking place. However, such improvements have not, or cannot, alter the fundamental laws governing telephony in any particular.

A Connecting Circuit

Some few of my readers will dispute figure 3 as not correct because it does not solve the problem of duplex or two-way conversations. Figure 4 (page 24) is therefore given as typical of the circuit used for duplex telephony. It comprises two of the circuits shown in figure 3 and a third, or connecting circuit, between them. With this arrangement, the receivers are connected together, the transmitters at either end of the line comprising individual circuits. As no physical or mechanical connection exists between any two of the three, then, to all intents and purposes, the completed circuit becomes an actual wireless circuit. We may, with all fair-

Figure 6

ness, consider the two outer circuits as broadcast transmitters, the central circuit comprising two receivers. The writer is of the belief that had this phenomena of voice transmission been properly exploited at its inception, as a discovery in wireless telephony, it would have created a furor not unlike that which Radio profited by.

Let us now return to figure 4 and trace this most interesting circuit, which makes possible two-way or duplex telephony. In figure 5 is shown the two windings comprising an audio frequency transformer as used in Radio receivers. These windings are placed over one another and separated with a compound which thoroughly insulates each winding from the other. The laminated core upon which the windings are pictured as mounted, having no bearing upon our present discussion, will not be considered, while figure 6 is included to show the type of audio transformer use in wire telephony, and which is termed an induction coil.

It will be noted that the circuits at either end of figure 4 are but duplicates of figure 3 with the receiver omitted, while the center circuit of figure 4 has, in effect, taken the receiver from the circuit show in figure 3 and inserted them in this circuit and in series with one of the windings of each of the coupling transformers. Going a step farther, we also note that in place of the receiver which was originally a part of figure 3, we have substituted the remaining winding of each of the transformers.

Gap Must Be Bridged

In order to make myself more clear, may I call your attention to the fact that neither of the three circuits have any mechanical or conductive connection each to the other, as we may ignore the vertical lines shown in figure 4. They merely represent the laminated core used in the transformers. It then follows, as previously

Figure 3

stated, that in order for communication to be established, the gap or distance between the windings of each transformer must be jumped or bridged through the medium of the air or some agency undiscernible and closely related to it.

Hence duplex telephony is virtually but another form of wireless communication with which the public has not been concerned because of its having become one of life's necessities.

Radio More Complex

While the relation of wire to audio tele-

phony is comparatively easily understood, the relation which Radio bears to each is somewhat more complex, except as we reverse the process of explanation. In doing so, I shall offer a discussion of the medium which Radio uses to span great areas or distances, which in this instance is light or the electromagnetic wave.

The nature of light has created much speculation. Physically, it appears as a ripple in a substance called ether. But this is of doubtful existence. Yet, admitting this uncertainty, the substance is of value toward the explanation of light waves. That light waves resemble sound waves, as ever expanding spheres, is readily recognized if we but visualize that the light from an ordinary lamp will shine equally in all directions, as will a sound wave, from a given source, penetrate equally over a like area.

While each is capable of being directed,

(Continued on page 24)

No More "B" Batteries on Your Radio

At last, a practical reliable "B" battery eliminator for your radio. Does away with "B" batteries; no charging; no replacing; Always 100% efficiency in "B" current. The most revolutionary development in radio.

Genuine Fansteel
Balkite
"B"
Eliminator
Sent for Only

\$1.00
Down

U.S. PAT.
MAY 27, 1924

The Balkite "B" is connected to your radio just like "B" batteries and attached to an ordinary electric light socket. Replaces "B" batteries entirely and furnishes "B" current direct from regular house lighting current.

Always gives current equal to four new and fresh 22½ Volt dry "B" batteries. For sets of five tubes or less. Simplifies radio receiving. More convenient, more economical and more efficient than dry or wet "B" batteries. Operates storage battery or dry cell tubes and gives tubes longer life. Entirely noiseless. Creates no disturbance in reception. Has no bulbs, nothing to break, wear out, replace or get out of order. Requires no change in your set, no extras to buy. Operates from 110-120 AC, 60 cycle current. Measures 8 3-16 inches by 8 inches by 3¼ inches. Current costs only 1-20 of a cent per hour.

\$5.00 a Month, if satisfied after trial

Only \$1.00 with the coupon below brings the Balkite "B" to your home on trial. Try it out thoroughly before you pay another penny. See how it improves reception. See how much more convenient than using batteries. Judge for yourself how it will save you money and make your radio set more enjoyable. Then, if not satisfied, send it back at our expense and we'll refund your \$1.00 plus all transportation charges. If you decide to keep the Balkite "B," start paying only \$5.00 a month until you have paid the total price of only \$35.00. That's the price others ask for spot cash. We give you the lowest cash price on easy monthly payments you will never feel.

Send Coupon

Don't miss this opportunity to get the genuine Balkite "B" at the rock-bottom cash price on easy monthly payments. Send coupon now while this offer lasts. Order by No. Y-8578A, \$1.00 with coupon; \$5.00 a month; total price \$35.00.

Figure 4

ABC'S OF RADIO SETS

(Continued from page 23)

through the application of mechanical means, and the resemblance is complete, yet each differs in the disturbance created. As has been, previously explained, sound waves comprise spheres of condensation and expansion. On the other hand, light waves can be shown to be spheres of electric or electromagnetic forces.

Light and Radio Have Same Speed

Light travels 186,000 miles a second, or 300,000 kilometers, but of greater interest is the somewhat startling fact that Radio waves travel at a like velocity. Light waves of varying colors are produced wherever electrical charges vibrate, examples being the X-Ray, violet, green and red, some of which are discernable to the naked eye. All may be photographed.

As it is evident that this particular portion of my explanation relative to Radio waves being comparable to light waves will carry on into my next article, it appears as expedient that I, at this point, answer the one question most often asked by the novice. "What is meant by the term 'wave lengths,' and what is meant by the term 'meter?'" In order to answer this compound question, it seems essential that I answer it backwards.

Definition of Wave Lengths

The definition of the word "meter" has not changed a ten-thousandth part of an inch since each of us went to school. Without reference to the French metric system of measurements, of which it is a part, one may define it as equal to 39.37-inches. This of itself is meaningless as

an explanation of what is meant when a station advises that it broadcasts upon a given wave length, which, for illustrative purposes, we will assume is 360 meters. May we then go a step further through determining the number of inches equaling 360 meters? This is but a problem in multiplication. The result shows that 360 meters is equal to 1,181.1 feet. Unlike the electric current used in wire telephony, that used for broadcasting is alternating in character, rather than continuous. These reversals of current flow are, however, so rapid that they appear as continuous. With each reversal a wave is released, similar in analogy to the ripple which follows along a rope which is swung at one end, the other end being fastened to some object. These ripples as they follow each other are known as crests, and the time interval between each crest determines its wave or crest length. The composite answer is that a station broadcasting upon a wave length of 360 meters has so timed each impulse from its transmission as to allow each succeeding wave or impulse to travel 1,181.1 feet before the next impulse is released. In other words, the time interval is that period of time which is consumed for each wave to travel the above mentioned distance.

Simple, is it not? Yet how perplexing until explained, which reminds me of the little school boy who complained that his teacher didn't know anything, because she was continually asking him questions.

Next week, Mr. Gurney will continue his interesting discussion of the relation between Radio and its associates, audio and wire telephony.—Editor's Note.

TESTS WILL AID PEACE

(Continued from page 4)

means to furnish a telephone service from one country to another, and from all countries to each other.

"For example," said Mr. Burrows, "if London wants a Bohemian program, the directors of programs in England do not have to try to arrange it and furnish it to their public—we simply hook up a line with Bohemia and give the English public a real Bohemian program with all native color direct."

And, of course, the same idea would work out just as well with Germany where the Radio broadcasting is restricted quite particularly to the opera and classical music in general. The Germans have been working industriously to develop equipment capable of receiving American programs. They expect to accomplish this result during the international broadcasting week.

Is it not conceivable that all the nations which participated in the world war might have found a way out of the conflagration if the millions of citizenry could have established an international comraderie through the Radio in the preceding years?

International interest in Radio would lead to a desire to understand the languages of other countries. Such languages could be taught over the Radio as they are now being taught in America. A better understanding of the languages would lead to a better understanding of the nations the languages represent because the listener would be interested in broadcasts coming from that country and such broadcasts naturally would present the viewpoint of that nation. An understanding of the language would lead to an interest in the literature and periodicals of a foreign country. All peoples would feel more neighborly, regardless of race, creed or nation.

Little has been said as to how the Asiatic countries will figure in this historic week of international broadcasting. Japan and China apparently will be in a position to listen to Europe with one ear as the waves sweep around the Indian sea and the Himalayas and to America with the other ear as the ether waves come singing over the Pacific. Whether they will attempt any broadcasting themselves for distant nations had not been announced at the time of this writing.

Radio Digest has received programs from Austria, Belgium, Denmark, England, Esthonia, Finland, France, Germany, Holland, Hungary, Italy, Jugo-Slavia, Norway, Russia, Spain, Sweden and Switzerland for the big international week. Other countries will be heard from west and south before January 24.

Long and loud may the great DX fraternity prosper! Now comes the time when George K. Babbit of Guthrie, Okla., U. S. A.; John Torro of Effingham, England; Gustav Schmalz of Koenigswusterhausen, Germany; Alphonse Beauvais of Chaumont, France, and all the other distance rangers may roam around the dials and bring in the same station with a common sympathy and delight for each other. And a blooper! Say let one of those birds start a squeal and all the nations would rise together and march shoulder to shoulder for a common—er, extermination!

British Notes

Important experiments have been made at 2LO with a form of "bottled Radio." The apparatus used was the telegraphone, which is a development of the old cylindrical phonograph record. It was used for recording part of the broadcast performance from an airplane, and will be brought into requisition in connection with the public speeches of eminent persons in cases where the installation of a "mike" is undesirable. While listeners may be prevented from hearing speeches at the moment of delivery, there will be no reason why they should not receive them a few hours afterwards when the station is not occupied.

One evening, this month, a shorthand demonstration will be given from 2LO, London, of words spoken at different rates. Lord Riddell, president of the Shorthand Fellowship and proprietor of the News of the World, a famous London paper, will speak at speeds, first of 100 then 150, and third, 200 words a minute. Shorthand experts will try to "take him down."

Oscillators are the chief subject of British complaints, and opinion is unanimous that some form of deterrent must be made use of before the nuisance can be entirely eradicated. Willful oscillators, it is urged, must be punished in a form fitting to their offense.

Roxy's Lair Disclosed

NEW YORK.—For the benefit of those who have not been able to trace S. L. Rothafel, "Roxy" of Radio fame, to his lair, it is announced that he has taken permanent quarters at Steinway hall, 113 West 57th street, room 605, New York, where he holds his rehearsals for the concerts at WEAf.

Years of experience are behind this radio battery

TWENTY years ago, when the automotive industry was in its infancy, Prest-O-Lite gave the motor-car its first dependable eyes. Today Prest-O-Lite Batteries, for radio and motor-cars, are sold by millions in all parts of the world, and there is always a Prest-O-Lite or radio dealer service station within a few steps of your home.

Prest-O-Lite Radio Batteries were especially designed for radio in the world's largest electrochemical laboratories. In engineering, materials and workmanship nobody offers more than Prest-O-Lite. Prest-O-Lite Storage Batteries deliver their rated ampere-hour capacity at full power, thus lengthening the time between recharging and assuring you good, clear reception.

The name Prest-O-Lite has always represented a product of highest grade and a manufacturer with twenty years' successful manufacturing experience has a dollars-and-cents value to you.

Prest-O-Lite Batteries are attractively priced from \$4.75 up. It is no longer necessary to take a chance on unknown makes.

STORAGE BATTERIES FOR
MOTOR-CARS AND RADIO

OPERATING AND TROUBLE SHOOTING

OPERATING and Trouble Shooting, is a Radio Digest feature, the purpose of which is to give practical information on the operation, care and cure of simple troubles in every kind of receiver. Standard Radio receivers of wide distribution and use are studied from the standpoint of instructions for installing and connecting, tuning and operating, and remedying little difficulties. The suggestions below, if executed faithfully, will make winter broadcast listening yield all there is to yield to the reader and give your set a fair chance to show its worth.

For the Owner of a Thorola Islodyne Receiver

THIS set is most unusual in many ways. In appearance, the front panel differs radically from any other receiver available, due to the attractive wood covering over most of the front panel. In efficiency, the effect of the doughnut coils-used is most noticeable in that this set really tunes sharp and confines local stations to a very few degrees on the dials. Operation is easily mastered and the controls have been reduced to the lowest possible minimum in a set of this type.

Islodyne comes sturdily packed against breakage and marring of the cabinet and is best removed from the container by placing carton on its side, opening the flaps at top and bottom and pushing through. Attempts to lift it out or drop it out were not very successful. The lint from the corrugated board may be removed with a soft cloth and at the same time the whole cabinet might well be gone over to restore the polish. There is no compartment for the batteries and space should be provided in the cabinet or table on which the set is placed, for them. A Belden battery cable affords a convenient means of making connections and was used by the writer when testing this set.

While there is an excellent diagram provided which shows clearly the proper battery connections, it may be a good idea to go over these for the benefit of those who may purchase from some one an Islodyne from which diagram card has been removed. There are three possible antenna connection posts; beginning at the left they are antenna long, antenna medium and antenna short. The choosing of the proper one for your installation is a matter of selectivity. If the antenna proper and the lead-in have a combined length of 105 to 125 feet, the "Antenna Long" binding post should give best results. Total lengths between 75 and 105 feet will probably call for the "Antenna Medium" post, while overall lengths of 40 to 75 feet should work better on the antenna short terminal.

Figure 1

Try connecting your antenna on first one and then the other of these until adjustment is reached that gives you the desired compromise between selectivity and volume on distant stations. This is a compromise on any receiver which may or may not have been settled by the maker before shipping the set. This choice, as provided in the Islodyne, seems to be the better way as all locations differ. No matter what the characteristics of your antenna, the long antenna connection will give the greatest selectivity, with medium next and the short connection the least. On the other hand, the short connection will give greater volume on long distance.

Ground Connections

The fourth terminal from the left is for the ground wire which can be attached to either the cold water pipe or, in rural districts, a long rod can be driven into the ground 4 to 10 feet. This should, if possible, be placed in a spot where the earth is always moist. If attaching to a water pipe, carefully scrape, file or sandpaper the nearest portion of the pipe, for a length of about three inches. A ground clamp, as carried by Radio and electrical stores, is much to be preferred and costs but little. Otherwise, remove the insulation from the last two feet of the wire and scrape it bright, then wrap this portion around the pipe pushing the turns closely together. Over this wrap a layer or two of tinfoil and then cover well with what is called "electrician's" or "bicycle" tape.

Connections for the speaker come next and are in the form of small cord tip jacks. It will be noted that, on most speakers, the cord terminates in two leads one of which is marked with a red tracer thread. The unmarked cord tip is to be plugged into the first of the two jacks while the marked one goes into the second. This makes quite a lot of difference in most speakers and if improperly done the speaker will sound badly choked and will rattle. If cord tips are not marked with tracer thread, some reversing will be necessary to determine which way sounds best.

Connecting the Batteries

Before connecting the batteries be sure that the storage battery is fully charged as indicated on a hydrometer. One of the caps on the battery must be unscrewed and the tip of the hydrometer inserted in the liquid. The bulb is then squeezed and released which will draw up electrolyte

into the large glass portion of this device. Within the hydrometer is a float on which there is a scale reading from 1,100 to 1,400. This float is read by noting the point on the scale opposite the surface of the liquid. The scale reading should be 1,210 or better. When between 1,280 and 1,310 battery is fully charged.

The first three terminals for batteries are for the B battery supply and are labelled B+90, B+45 and B-. This B power supply may take the form of dry cell B units as made by Eveready, may be of the storage battery type, as constructed by Prest-O-Lite, World or Hawley, or may be one of the B eliminators on the market which supply direct current in the correct voltages when connected to the electric light socket. If a B eliminator is used, the binding posts will be found to carry practically the same identifications as those on the set although they may read B+100, B+50 and B-.

If batteries are used, either dry or wet, it will be found they come in 45-volt units and two will be required. The minus terminal on one of them is to be connected to the third from the last post in the set, which is labelled B-. The other terminal on this battery is then to be connected to the B+45 post in the set and to the minus terminal of the second B battery. The remaining plus terminal on the second battery goes to the B+90 post in the set.

The last two posts in the set are for connection to the storage battery, usually called the "A" battery. One terminal of this battery will be found marked POS, + or painted red. This must be connected to the next to the last binding post while the second terminal of the storage battery connects to the last post on the set.

Tuning Controls

The three large knobs provided with pointers, which revolve over engraved scales, are the actual tuning controls. The center one, and that to the right, which we will call numbers 2 and 3, will be found to read practically the same on any station. Dial number 1 will probably read somewhat lower due to the effect of the antenna. Since every antenna installation varies it would be impossible for any manufacturer to alter this point. Below the dials there are two knobs and one switch. The switch is used to turn the current on and off. One must get in the habit of snapping this to the left when through with the set. If a B eliminator is used instead of B batteries, the switch controlling the house current should also be turned off.

The knob to the left controls the brilliancy of the first three tubes; the two which amplify the signals while still at radio frequencies, and the detector. This knob must be turned to the right to light the tubes and is used as a volume control on local stations or exceptionally loud distant programs. It also permits control over any tendency toward oscillation.

(Continued on page 26)

Now you can hear ALL notes!

A Thordarson Autoformer Amplifier built in accordance with instructions and diagrams furnished with each Autoformer

- 1 Full amplification of those bass notes hitherto largely "lost."
- 2 Greater clarity on all notes.
- 3 Improved reception of distant programs.
- 4 Better volume control.

These are the four great improvements achieved by Autoformer Amplification

Deepest Bass to Highest Treble Brought Out Clearly

The Thordarson Autoformer is not "another transformer." It is an all-frequency amplifier, an entirely new instrument developed and built only by Thordarson. Autoformer Amplification is step-up impedance coupled with capacities and resistances. Write for fully descriptive literature. Autoformers, \$5 each. Dealers everywhere.

(Continued from page 25)

tion on the lower wave lengths, 0 to 30 on the dials, which would evidence itself by squeals, howls and distortion. Turning it to the left clarifies the program.

The other knob is called a "distance amplifier control" and adjustment is necessary only on distant stations. By turning it to the right, the volume on weak or far-away stations can be built up. When receiving local and nearby programs, and also distant stations found between 0 and 30 on the dials, this knob should be kept turned to the left. Much of the really exceptional volume on out-of-town stations possible with this set is due to proper use of this knob to the right, and this innovation is both new and exclusive with the IsloDYNE.

Method of Tuning

It is suggested, to start, that the first dial be placed at 28 and then a hand placed on each of the other two so they can be revolved together. Revolve them slowly, and together, between 30 and 40. If no program is heard, turn the left knob slightly toward the right and try it again. If again there is no result, reset dial 1 at 30 and revolve the other two between 30 and 42. This should be tried several times, moving dial 1 two degrees each time. At some setting of the left knob and dial 1, a program will be encountered when revolving dials 2 and 3. Slight re-

adjustment of all three dials and the knob will quickly bring the station in with maximum volume and clearness.

It is good practice to jot down the settings of the three dials for about seven stations, well distributed over the dials, and then make a chart, such as that reproduced here. Wave lengths are evenly spaced along one edge and dial settings from 1 to 100 along an adjacent edge. The little crosses for the settings of dial 3 can then be connected and will make a curve as shown. Do the same with the crosses for dial 2 settings and those of dial 1. If dials 2 and 3 run exactly together throughout the scale, only one curve for both of them is necessary.

As in any receiver of the tuned radio frequency type, it is a good policy to switch tubes around in their sockets when tuned in on a distant station, as nearly always there is one that makes a better detector than the rest and two that are superior as radio frequency amplifiers.

(The Stewart-Warner receiver will be studied next week.—Editor's Note.)

ANIMALS HEARD ON AIR

(Continued from page 5)

the tale, greatly exaggerated, reaches Leo, the lion. Then the whole zoo is in an uproar—and over nothing at all!

Carl Laemmle, pater familias to the Universal institution in general, got the idea the children would like to listen in on some of this jungle pow-wow. So he had a microphone brought up for the animals to make their Radio debut. Jiggs started it off and Leo ended it. The children pronounced it a great success.

It was over a year ago that the golden notes of the English nightingale were wafted into a concealed microphone and broadcast to Radio listeners throughout the British Isles and even so far as the continent. A pair of the nightingales had taken up their residence in a small arbor in the garden of Colonel and Mrs. Harrison's estate near London. Cables were laid through the vines and a microphone ambushed among the leaves. Miss Beatrice Harrison, having previously discovered that the birds found inspiration in her 'cello, carried the instrument out to a convenient place and began to play. Seemingly flattered by such an unusual accompaniment the nightingales fluttered near and took up the song, their tiny throats fairly bursting with throbbing melody.

Off through the cables and the tubes and the antenna their voices were instantly radiated for a thousand or more miles round about bringing intense joy to children and their elders in the more crowded districts of the city where nightingales are unknown.

We are enraptured with the songs of the birds but few persons would care to compliment the sea lions for their vocal accomplishments. Imagine a sea lion duet! They are like some Radio sets—plenty of volume but low grade quality. However, in the New York zoological park, a microphone was placed at the edge of the pool where the sea lions live. To a sea lion volume is the essence of quality in itself and the sea lion that can croak and bark the loudest gets the prima dona role. So the prima dona and the runner up put on a duet that almost knocked everything but the crystal sets out of business for miles around.

Dogs on numerous occasions have had their turn at broadcasting. One of the most intelligent dog Radio artists naturally lives in Boston. His name is Pep. And the hundreds of thousands of chil-

dren who spend the story hour with Big Brother Bob Emery are acquainted with Pep's cheerful ejaculations at appropriate times. Pep is the original "Big Radio Dog." He enjoys the WEEI story hour as much as anybody and seems to fully comprehend what is expected of him. When he addresses the microphone he puts his paws on Brother Bob's shoulders and his jaws come about level with the aperture. If he were to stand up straight on his hind legs Big Brother Bob would come about to Pep's collar buckle.

Maude, Julie and Trixie, three music loving young elephants at Luna Park, New York, prefer to do their broadcasting in the old-fashioned way without the aid of Radio transmission but when it comes to listening in just hand them a good super-heret and they will tickle the dials with the sensitive tips of their trunks until they get what they want through the loud speaker. Then they will sit back on some old tubs and listen with the keenest pleasure. They are particularly fond of band music and sway their bodies when the rhythm isn't too fast.

Some smart uncle or aunt or big brother will get the animals together one of these days and put on a regular air circus. Peter Rabbit may be lost in the broadcast shuffle but the Three Bears ought to be able to do their stuff with a little assistance and then happy days will come for our over-sophisticated youngsters.

Long Waves Are Better

LONDON.—Experience so far in re-broadcasting, on high power, messages received on short wave lengths, has not been entirely satisfactory here. Shorter waves have proved inconsistent, and show more erratic characteristics than the longer wave transmissions. The results of recent tests show that during daylight the short wave transmission, however, is much to be preferred

Rule Against Battery Charger

ZANESVILLE, Ohio.—The city council here has passed an ordinance making it a violation of law to operate a battery charger of the vibrator type between the hours of six o'clock in the evening and five o'clock the next morning. This ordinance was passed to prevent any interference from that source. A fine is imposed if there is a violation.

Your Choice

Limited Number Available

We have a limited number of bound volumes which we are disposing of at a low cost to readers of Radio Digest. Fill in the coupon below immediately. This offer holds good only on the following volumes, while they last, 8, 9, 10, 11, 12, 13 and 14.

ARBORPHONE —the Incomparable

WHEN you can tune in KFI, Los Angeles, 467 meters, at exactly the time WCAP, Washington, 468.5 meters, is broadcasting, then switch to WCAP—and get either station, clear, strong and without interference—well, that is real radio performance.

Arborphone does that for many owners (letters on file). For signal strength, for pure, clear reception and for sensitive tuning, Arborphone will equal any set, surpass most of them.

European stations will be heard by many Arborphone owners during International Test Week. Splendid prizes offered for exceptional performance records. How many stations will you get?

Get a copy of our new radio book—your's for the asking—full of interesting radio facts. Ask your dealer about Arborphone—the finest value in radio.

Unitrola: Single Dial Phonograph Receiver

Part I—A Five Tube Set on a 12-Inch Panel

By Carl Patterson

FOR some reason known only to herself, Dame Nature gave us only two hands. Of course in Adam, the original model, she didn't have a Radio enthusiast and possibly the fact that his ancestors might wish to twist dials didn't occur to her. At any rate, two is all most of us have, yet just now there are more three-dial receivers being tuned nightly than any other kind. Personally, I do not like moving two dials just two degrees at a time and then jockeying the third; it takes too long to run the scale looking for stations that may still be on at two a. m., and one can miss them anyhow. This set I am about to describe, originally had two dials, and, personally, I thought it was about all that one could want, but not Mrs. C. P.

Only One Dial

The two dials ran almost together but on the lower waves they began to spread a little—"not so good." The set was, accordingly, redesigned and rebuilt. Incidentally, there were a few suggestions made that it might just as well go in the phonograph since we use a phonograph speaker unit anyway. There being only one dial, this was a perfectly feasible suggestion, and the resulting design, while it looks far from the customary shape of a Radio receiver, is an unexcelled 5-tube performer and is out of sight when not in use. Although a Radio bug, I'll admit there is little of beauty in most home built sets.

There are few phonographs of either the console or upright variety that this set will not go in. Of course many consoles have a lid over the record compartment which lifts upward and the panel of a set for that type would have to be horizontal. On the other hand, there are just as many consoles in which a door opens at the front admitting one to the record compartment, and all uprights have that kind of door on the record space. The panel of this set is but 12 inches wide and all phonographs are that wide. In depth, Unitrola is 16 inches and most talking machines are closer to 20 inches inside depth. The height is the usual 7 inches; I couldn't go any further from

Figure 1

regulation style and had to have something standard.

Panel at an Angle

Since this receiver is to be operated in a position below table height, the panel is tipped back 30 degrees. When one is sitting or standing in front of Unitrola, tuning can be done most easily because of this slant. The single dial control is, of course, a pleasant innovation, but here is another. Due to the set being down inside the record compartment, it is comparatively dark, so a light, run from the battery, is placed on the panel close to the dial markings. It draws but little current and will not materially hasten the discharge of the battery. Across the dial from it is a pilot switch as the set being unobtrusively placed in the phonograph, it is surprisingly easy to walk off and leave the tubes burning.

The United Scientific Laboratory multiple condenser is a thing of beauty both

mechanically and electrically. Study of it brings to mind the words "Packard assembly." The plates are all of brass, well aligned and sturdily held together. The compensating arrangement for two of the sections is most unusual in that the two knobs do not affect the rotor. The large knob of course turns all three rotors simultaneously but each of the smaller

ones swings a stator. The rear stator has no adjustment. The center stator is pivoted at the right side and the left knob, by means of a cam, swings this stator up into deeper mesh with the center rotor in whatever position it may be. The front stator is pivoted at the left side and the right compensator knob swings this stator up or down. Thus the small differences in capacities, wiring, etc., are taken care of very nicely.

Bodine coils are a new type of inductance that are both logical and technically correct. They are a cross between a binocular and a D-coil that results in a compact field and little tendency toward interaction between secondaries. For this set their physical compactness is ideal and parts can be placed fairly close without loss or oscillation. They mount easily and are low in cost, both points to be considered carefully. See that you get type T-35 which is the correct size for the .00035 units in the multiple condenser.

The new Amsco sockets are designed to take the tubes, now being sold by nearly all dealers, with the new UX base. Other sockets can of course be used but these are easily mounted by one machine screw, make very fine contact with the tube pins and should give very low losses. The contacts are as far apart as they could possibly be and genuine bakelite has been used for the main supporting block. If you are using tubes made by R. C. A. or Cunningham, you will find that from now on, dealers will have the new base tubes.

A Good Loop is Easy to Build if You Use Belden Loop Wire

WHEN you build your new loop antenna, obtain maximum efficiency by using the special loop wire prepared by Belden engineers for standard loops. The Belden loop wire is made of sixty strands of No. 38 copper wire combined with five strands of No. 36 copper wire which has been treated to prevent stretching. All strands are insulated with a double wrap of cotton or with a Rayon braid. This unique construction provides a non-kinking, non-stretching, non-sagging conductor that will make a splendid loop, and one that will keep taut.

Ask your dealer for Belden loop wire!

Belden

Belden Loop Wire is a special high-frequency conductor, ranging from 20 to 48 strands of Beldenmetal. Furnished in 100-ft. spools for winding high-frequency coils and apparatus.

UNITROLA: SINGLE DIAL
(Continued from page 27)

While everyone does not, possibly, prefer the plate resistance method of controlling oscillations at the lower wave

lengths, it has always given me sets that equal anything else in the tuned radio frequency class, so I have put a C-R-L unit of 200,000 ohms in the common plate return of the two R.F. tubes and, by it, one can bring the circuits up to oscillation at any wave length. Some may claim that the efficiency is thus cut down at the lower end of the scale by insertion of resistance but surely it is not cut down any more than if one applied only 67 volts on the plates and this method has the advantage that regeneration can be secured at the upper end of the scale. Few tuned R.F. sets are efficient above 450 meters as regards range or, if they are, the rheostats must usually be turned down to prevent oscillation below 300 meters.

Thordarson Transformers Used

Following the detector in Unitrola there are two stages of transformer coupled audio frequency amplification and the volume on anything within range will comfortably fill a good size room. Thordarson transformers are used and the amplification over the entire musical scale is nearly even. They were the first to bring out this type of transformer with large primary and low ratio and, while their unit may be equalled by a very few and usually at a higher price, the results are not surpassed. The amplification per stage is far greater than most experimenters are used to and on locals it would be far too great for comfort or the ability of a speaker to handle if means of control were not provided. Accordingly, another C-R-L resistor is placed across one of the audio amplifier grid circuits and gives smooth, even control from whisper to roar. I first saw this system on one of Jacques Fournier's Fireside receivers and liked it so well I put it on Unitrola's predecessor.

These audio frequency amplifiers are lighted through Amperites as elimination of panel adjustments is always desirable and particularly so on this set with its

2 Audio Transformers, 2-1	Thordarson Elec. Co., Chicago	10.00
Total Cost		\$57.85

It was soon found that the dial light was not needed during the day as the light from the windows illuminates the dial plentifully. Having both the Dialite and the Pilot switch, a combination was soon worked out by which the Dialite could be turned on or off irrespective of the current to the filaments and the Pilot switch is used not only to indicate

whether the tubes are lighted but also to turn them on or off. A quarter turn of the hood on the Carter Dialite puts it on at night and off when set is used during the day.

As to results with this set, I have seen but one receiver of the tuned R.F. type to compare with it and that is the highest priced neutrodyne on the market. On a 60-foot antenna, with, of course, a well made ground, it steps out of Chicago's congested North Side, through WEBH, WQJ, WIBO, WBBM, et al, and brings us the Hired Hand from Fort Worth, the Dixola novelty orchestra from New Orleans, Goldie and Dusty from New York and the stations lining the shores of the Great Lakes. No, we do not "do the Coast" every night. Those much sought entertainers, KFI and KGO, come through with commendable frequency but are not nightly playmates. Probably those living out on farms or in smaller cities throughout Iowa, Wisconsin and Indiana, where aerial traffic is not quite so thick, could use a slightly longer antenna and bring in the coast regularly.

(In next week's issue Mr. Patterson will go into the drilling and assembly of panel and baseboard and the bending of the special brackets out of the aluminum.—Editor's Note.)

Reader Shows Novel Use of Table

Evening at Home Made Up for Easy Reference

One of the most valuable features of Radio Digest, I think, is the "Evening at Home with the Listener In" table. I have found it very useful in operating my set. However, I find it difficult to follow with the eye clear across the line of days to

WORKSHOP KINKS EARN A DOLLAR—

THERE are many little kinks worked out at home that would aid your fellow Radio worker if only he knew about them. There are new hook-ups, new ways of making parts and various unique ways of operating sets that are discovered every day. Radio Digest is very much interested in obtaining such material. Send them in with full details, including stamped envelope, so rejected copy may be returned. The work must be entirely original, not copied.

RADIO KINKS DEPARTMENT
Radio Digest
510 North Dearborn St., Chicago

the day on which I am listening, and so have devised the following scheme to assist me in using the list:

Although only the top part of the list is shown in the illustration, I cut a strip of stiff cardboard the length of the full table, and as wide as the first four columns, which include the call, location, meters, and the Saturday list of hours. I then carefully clip the list out of the issue, and cut it in eight strips, as shown. Seven of these strips are the days, of course, and the eighth includes the call, location, and meters. The last mentioned strip I paste flush with the left edge of the cardboard, putting paste all over the back of the clipped strip before mounting. Then I put a square of paste at the point marked "paste here only" in the drawing, and being careful that the hours calendar properly with the stations they are meant for, I stick the top edge of the Saturday column on this spot of paste. Over this same spot paste is again applied, and Sunday's column is pasted in place right over Saturday. The same method is continued until all seven of the hours columns are mounted in order one on top of the other.

The result is a cardboard strip about twelve inches long and a little less than two inches wide, with top mounted and hinged "pages" for each day of the week showing the evening hours stations can be found broadcasting.

The mounted table is very simple to make and I find it much more convenient to handle. I keep the latest table prepared in this form at all times beside my receiver.—A. R. Poirier, Providence, R. I.

Short waves travel farther than long waves and require less power to cover the same distance than the longer waves.

SOLDIERS LOVE WMCA

(Continued from page 7)

success of these productions? Many deep and ponderous councils floundered through the problem. But finally Radio won. The productions were heard on the air and the box office found no reason to complain.

Today Mr. Weir is able to present each Thursday, over WMCA, the principals and chorus of the leading Broadway shows at a midnight special studio performance.

Many celebrities have been heard over the WMCA microphone. One of the more recent artists to make history there was Samuel Siegel, world famous mandolinist, who surrendered all that he had achieved with this small instrument twenty years ago, because he could not persuade the world to regard the mandolin seriously. He alone had brought it to the heights of artistic success. Wherever he appeared he was acclaimed but there it ended. The world at large, not having heard the master, smiled at the mandolin as a college serenader's toy. For twenty years, Siegel put his mandolin aside nor could he be persuaded to play it again until recently.

Then friends induced him to bring it to Radio Station WMCA. He played. A flood of letters indicated that he was still the master and he himself was satisfied because now he hopes through the Radio to reach millions and prove to the world that the mandolin is capable of the finest artistic achievement.

Miss Lois Mayer of Paris, Texas, was discovered to have a voice of extraordinary

power and tenderness and she was featured during the Hardman Hour of Music over WMCA. Harriette Keyes, famous on the Victor records and on the stage the country over, was annexed as one of the regular stars at the McAlpin studios. Louise Bave, who at the age of 19, made her debut at La Scala in Milan, under Toscanini was brought by Arthur L. Lee, managing director of the McAlpin, to the WMCA station as a regular feature.

Miss Bave is the girl with the three octave voice taking high G, with ease and

▲ TONE

Full, sweet, mellow and natural, without the slightest indication of distortion, is another achievement that is making the APEX SUPER FIVE the most popular of all receiving sets.

▲ VOLUME

That supplies dance music or entertainment without any loss, is a feature for which the APEX SUPER FIVE is world famed.

▲ DISTANCE

Lends added enjoyment to radio with an indescribable fascination of tuning-in far away stations, which is always possible with the APEX SUPER FIVE.

Ask your dealer for a demonstration. Your eyes and your ears will tell you that APEX stands at the high point of perfection in both performance and appearance. \$80 — without accessories.

SUPER 5

CHICAGO

clearness. She can sing with the coloratura range most effectively having the depth and warmth necessary for lyric roles.

Benar Barzelay, Polish violinist, who has played at the command of royalty in five European countries, was presented to the audiences of the McAlpin Radio station. Of course, the big features are Ernie Golden's orchestra and Olcott Vail's String Ensemble and the Symphony orchestra.

One of the oldest, WMCA has continued to grow in prestige and stands among the first of the leading Radio broadcasting stations of the United States—and the United States has a long march in the lead of every other country in the world in its popular Radio transmission.

New Belgium Station On Air

BRUSSELS, Belgium.—The province of Liege, which complained of not hearing the Radio-Belgique transmission from Brussels, now has no less than three stations of its own. The opening of Radio-Wallenie was reported recently. Its wave length has been definitely fixed at 285 meters. The newcomers are Radio-Central, 205 meters, and Seraing-Radio, 195 meters.

15,000 Study Spanish

DENVER.—Thousands of broadcast listeners comprising what is believed one of the largest educational classes ever organized, are now studying Spanish every Monday evening over KOA, Denver station of the General Electric company. More than 15,000 persons, representing all nationalities and walks of life thus far have been registered for this course.

Hawaii Heard Every Night

CHICAGO.—Hawaii has been reached regularly each week for the past two months, according to the Stewart-Warner studio of Station WBBM here. Communications received by the station indicate that WBBM is being heard consistently in the islands in the Pacific ocean since winter weather has set in.

Steinite Low Loss Interference Eliminator

No Radio Set Complete Without It

Select stations at will. With music and voices crowding the air the average set fails to bring in the desired stations properly. The Steinite Interference Eliminator shuts out local and other interference. You get one station at a time, the one you want, and tune in loud and clear. Operates on any set—attach to aerial wire and to set—no changes—no extra tubes or batteries. Greatest Dollar Value in Radio Today.

Over 150,000 Sold

Improved Results with Tube or Crystal

Try entirely at my risk the wonderful improvement this inexpensive little device will make in the reception of your set. Improves results on both crystal and tube sets that use any kind of aerial except loop antenna. Clears up reception wonderfully, increases volume, and partially absorbs static. Money-Back Guaranteed.

Mrs. Famous 1,500 Mi. Steinite 1-Tube Set, \$6; Long Distance Crystal Set, \$6; Steinite Crystal 50¢—Three for \$1.

Steinite 5-Tube Set \$29.75
FREE Descriptive Literature on request.

Put this interference eliminator on your set and note amazing improvement. No tools needed—install in a moments time. Connect with set and follow simple instructions. Money back promptly if not delighted. \$1.00 postpaid anywhere in U. S. when cash with order.

\$2.75 C.O.D. World Storage "B" Battery

12 Cells, 24 Volt units. Equipped with Solid Rubber Case, an insurance against acid and leakage. Extra heavy glass jars. Heavy rugged plates. Built with the same care and precision as the famous World Radio "A" Batteries.

Lasts Indefinitely—Pays for Itself

Economy and performance unheard of before! Recharged at a negligible cost. Delivers unfailing power that is clear, pure and quiet. Tube plate (B) voltage is best served by storage battery power. It is, above all, constant, unvarying, dependable and efficient. Radio tubes are far too critical to subject them to power less efficient than that coming from a good storage "B" battery. Your set demands the best!

Tested and Approved by Leading Authorities

The following qualified institutions of merit have tested and approved World Storage "B" Batteries: Radio News Laboratories, Popular Science Institute of Standards, Popular Radio Laboratories, Radio Broadcast Laboratories, Radio Age Laboratories, Lefax, Inc., and others equally important. You can depend on a tried and proven article when you decide on a World Storage "B" Battery. Thousands in use. Order yours today!

SEND NO MONEY

Just state number of batteries wanted and we will ship day order is received. Extra Offer: 4 batteries in series (96 volts), \$10.50. Pay expressman after examining batteries. 5 percent discount for cash with order. Save 50 percent—get a tried and proven battery of merit, by mailing your order in NOW!

WORLD BATTERY COMPANY
1219 So. Wabash Ave., Dept. 76 Chicago, Ill.
Makers of the Famous World Radio "A" Storage Battery
Prices: 6-volt, 100 Amp. \$11.35; 120 Amp. \$13.25; 140 Amp. \$14.00.
All equipped with Solid Rubber Case.

World Storage Batteries

Set your Radio Dials at 210 meters for the new 1000 watt World Storage Battery Station, W.B.C., Chicago. Watch for announcements.

Questions and Answers

Charging A Battery with Generator
EW, Lancaster, Mo.

Can I use the generator off of an automobile to charge a 100-ampere hour Radio A battery? Can I remove the generator and connect it by belt to a small gas engine to do this?

If so, how many hours would it take to fully charge the battery? Would I need to put the car's ammeter in the line when I charged the battery?

A.—It is entirely feasible for you to charge your 100-ampere hour storage battery by connecting it to a 6-volt generator. If the car which you have uses a 6-volt generator, you will then find that the car starting battery is also 6 volts.

It will then only be necessary for you to disconnect the starting battery, take it out of the car and replace it with the battery you use for Radio.

Start your engine and allow it to run fast enough that it is showing by the dash ammeter it is charging. This can be done during daylight hours with the car standing still.

We believe that there is an ammeter on your car which shows the rate depending on speed of engine of charge. It is only necessary for you to divide 100 by this rate to determine the number of hours necessary to run before the battery is fully charged. If no ammeter is on the car, you may then secure a hydrometer for testing the battery's specific gravity. When the specific gravity reaches between 1275 and 1300, the battery will be charged and ready for use.

How to Make Tuning Chart

WEM, Sharpsburg, Ga.

In looking back over your Radio Digest dated November 21, 1925, I found something that I would like for you to furnish me if possible. On pages 27 and 28 is an explanation of how to set your dials to pick up different stations. I have an Atwater Kent five tube set and I am unable to get different stations. If you will furnish me with a chart showing how to get different stations, I will pay you what you ask.

A.—The chart shown in our November 21 issue of Radio Digest we felt was self explanatory. However we are pleased to inform you further about it.

The process which you should follow is to first draw the chart without any of the station notations, on the left of it is indicated the dial readings, while the base line indicates the wave length in meters.

Proceed to tune your receiver, and as you secure a station, note the dial setting, also the wave length of that station. Then place a dot at the intersection of these two values. Once you have secured the location thus for several stations, a line joining the dots can be drawn and others can be found automatically on this line.

Please understand that this is merely a guide, and is of no assistance in assisting you to use your receiver to separate or secure stations beyond the possibilities of your receiver. It is primarily a handy chart for easily determining at a glance the approximate dial setting for a given wave length.

Electric Pad Interference

LHL, Big Timber, Mont.

As a regular subscriber of your valuable paper, I wish to ask if there is not some way in which I can eliminate the interference caused in my set by an electric heating pad used about 100 feet away from my location by an invalid. He uses the pad all day and night, and the prospects are that he will continue to use it for some time. Cannot the thermostat be grounded in some fashion?

A.—Place two heavy fixed condensers, say one or two microfarads, in series across the line just ahead of the pad. Attach a wire to the wire connecting the two condensers, and run this wire to a good ground connection. This may stop the interference. See Radio Digest issues of August 1 and 8 for a complete treatise on the causes and cure of Radio inductive interference.

As you hear stations, insert proper stamps. A fascinating hobby. A permanent record of stations heard. You and your children and friends will enjoy it.

Send No Money

Pay postman \$1 after stamps and FREE album arrive. We prepay postage if you prefer to pay with order. MONEY REFUNDED if not DELIGHTED. Send order today—NOW. Postal will do. **IDEAL CO.**, Dept. 9411, 366 Wrigley Bldg., Chicago

ARE YOU THE MAN

to be first in your town to sell and demonstrate POWEROLA, the famous 5 tube NO-BATTERY ELECTRIC LIGHT SOCKET RADIO RECEIVER (not an attachment), universal for D.C. or A.C. (100-115 v., 40-60 cycle), now sold and demonstrated by **THE NEW YORK EDISON CO.**, public utility companies and radio, electric and music dealers everywhere. Absolutely dependable, fully guaranteed, powerful, practical, perfect in performance.

Are You the Man Who Sees Opportunities Ahead for Real Money Making?

Write for literature, terms and prices at once.

You, Too, Can Make Powerola

Send \$1.00 for wiring diagrams showing parts used and how to make any set or circuit (one to eight tubes) operate satisfactorily from A.C. or D.C. current.

Photogravures of Your Favorite Artists

GALLERY OF RADIO STARS

Suitable for Framing or Placing in Your Album

BY SPECIAL arrangement, Radio Digest is able to offer its readers a great opportunity to secure fine photogravures of their favorite Radio stars at practically no cost.

Radio fans will be able now, by this very special offer, to have pictures of their favorite artists and announcers before them when they listen in.

All that is necessary to secure photogravures from the Gallery of Radio Stars is to send the coupon published each week in Radio Digest, accompanied by ten cents to cover the cost of mailing and postage. Where a series of three photogravures is desired, it will only be necessary to send twenty-five cents and three consecutively numbered coupons clipped from Radio Digest.
